SUMMARY

BACKGROUND

This Solvency and Financial Condition Report ('SFCR') has been prepared by Countrywide Assured plc ('CA plc', the 'company'), and is for the year ended 31 December 2018. This report has been prepared for the benefit of policyholders and other parties who have an interest in the solvency and financial condition of the company. In accordance with the Solvency II framework this report follows a standardised structure and includes specific content to meet the detailed reporting requirements of the framework.

During 2018, the PRA issued PS25/18 "Solvency II: External audit of the public disclosure requirement". This policy statement permits companies to no longer require an external audit of the SFCR should the company's financial position be below certain thresholds that are correlated to the size of the company. CA's financial metrics fall below these thresholds and as consequence this document has not been subject to an independent external audit.

A summary of this report has been provided below. It focuses on key messages and highlights key changes during 2018 that have been reported in the main body of this report. To aid the reader the summary follows the structure of the main body of this report.

A. BUSINESS AND PERFORMANCE

This section of the report provides background information on the company and its performance. CA plc is a life insurance company that forms part of the Chesnara plc group. Chesnara plc is listed on the London Stock Exchange. CA plc is substantially closed to new business and its strategic focus is the efficient run-off of the existing portfolio of policies. The company's portfolio of policies has come from four separate companies which were combined within CA plc as part of Chesnara's acquisition strategy. The business of CA plc has not changed significantly over the year. Highlights from the business and performance section of this report include:

- The company has reported an underwriting performance of £28.2m (2017: £50.6m).
- Solvency ratio of 191% pre-dividend (2017: 155%). After recognising a foreseeable dividend of £59.0m (2017: £32.0m) the closing solvency ratio is 130% (2017: 130%).
- £26.8m of capital was transferred from the company's with-profit funds.
- Prior to the transfer of surplus from the with-profit funds, regulatory approval was sought from and subsequently granted by the FCA, once it was satisfied that the transfer was not to the detriment of policyholders.
- The investigation into how the company disclosed exit fees to customers, initially announced on 3 March 2016, has been closed by the FCA without any further action.

B. SYSTEMS OF GOVERNANCE

This section of the report provides information on the overall governance structure of the business, its risk management and internal control system. It details the board's overall responsibilities and how the board delivers these through the use of its sub-committees. The section also provides further information on the key functions that exist within the business and how these functions support the company in achieving its goals. The key functions that have been identified are; Risk Management, Compliance, Internal Audit, Actuarial, Operations, Finance and Investments.

During the year, Gabrielle Towell was been appointed as Compliance Officer and Karen Miller was appointed as the With-Profits Actuary.

On 1 October 2018 Mike Evans resigned as an Independent Non-Executive Director. Mark Hesketh was appointed as an Independent Non-Executive Director on 17 December 2018.

There have been no significant changes in the company's systems of governance during the year. The board and committee structures have remained consistent throughout the financial year.

C. RISK PROFILE

Information on the risk profile of the company can be found in this section of the report. A combination of qualitative and quantitative information has been provided to articulate the risk profile of the company. Quantitative risk profile information in this section has been provided using the results of the company's solvency capital requirement calculations. The company is required to hold capital to help it manage the financial impact of any of the risks materialising. Regulators have specified a "Standard Formula" to use when calculating the amount of capital that it is required to hold against each Solvency II risk category and the board has determined that the Standard Formula, without any adjustments, continues to give an appropriate outcome. The information provided includes analysis of the sensitivity of the solvency position of the company to key variables.

There have been no fundamental changes in the overall risk profile of the company over the year. On a forward looking basis, the external environment continues to bring a level of uncertainty, particularly with the potential impact of Brexit on investment market conditions. The threat from other external factors, such as cyber risk, continues to be monitored closely by the business in order to protect the delivery of our core business services. The company plans to continue to test its operational resilience to such threats in the future.

SUMMARY (CONTINUED)

D. VALUATION FOR SOLVENCY PURPOSE

This section of the report provides information on the company's assets and liabilities. It gives quantitative information regarding the value of assets and liabilities held at the reference date of this report, and provides information on how the value of the key asset and liability classes have been calculated.

The practices used for valuing assets and liabilities for solvency purposes have remained consistent with last year. There are no new material classes of assets or liabilities to which the company is exposed.

A summary of the company's assets and liabilities at 31 December 2018 and 31 December 2017 has been provided below:

	31 December 2018	31 December 2017
	£'000	£'000
Assets	2,437,015	2,882,238
Net technical provisions	(2,157,985)	(2,478,738)
Other liabilities	(88,623)	(178,271)
Assets less liabilities	190,407	225,229

E. CAPITAL MANAGEMENT

The final section of this report provides information on the capital position of the company. It builds on the information included in section D of the report and introduces further information on the level of capital that is required to be held by the company, and how the assets and liabilities that are held by the company meet these requirements. The section also provides information on the policies and practices that are employed by the company in managing its capital.

There have been no significant changes to the way in which the company manages its capital. The board-approved capital management policy, underpinning any capital decisions, has remained materially unchanged over the year.

The company's capital position at 31 December 2018 can be summarised in the following table:

	31 December 2018	31 December 2017
	£'000	£'000
Assets less liabilities	190,407	225,229
Foreseeable dividends	(59,000)	(32,000)
Restricted Own Funds in ring fenced funds	(5,672)	(26,543)
Own Funds	125,735	166,686
Solvency Capital Requirement (SCR)	96,591	128,060
Surplus Own Funds over SCR	29,144	38,626
Ratio of eligible Own Funds to SCR	130.2%	130.2%

- The company has Own Funds (representing the net assets and liabilities of the company as measured on a Solvency II basis) that exceed the capital requirements of the company by £29.1m (2017: £38.6m).
- This gives rise to a solvency ratio of 130.2% at 31 December 2018 (2017 130.2%) and is stated after a proposed dividend of £59.0m (2017:£32.0m), which is due to be paid during 2019.

This section also includes movement analysis of the 2017 to 2018 positions for the excess of assets over liabilities and SCR.

DIRECTORS' RESPONSIBILITY STATEMENT IN RESPECT OF THE SOLVENCY AND FINANCIAL CONDITION REPORT

The Directors are responsible for preparing the Solvency and Financial Condition Reports in accordance with applicable law and regulations.

The PRA Rulebook for Solvency II firms in Rule 6.1(2) and Rule 6.2(1) of the reporting Part requires that the Company must have in place a policy of ensuring the ongoing appropriateness of any information disclosed and that the company must ensure that its SFCR is approved by the directors.

Each director certifies that:

- (a) the Solvency and Financial Condition Report has been properly prepared in all material respects in accordance with the PRA rules and Solvency II Regulations;
- (b) throughout the financial year in question, the Company has complied in all material respects with the requirements of the PRA rules and Solvency II Regulations as applicable to the Company; and
- (c) it is reasonable to believe that, at the date of the publication of the SFCR, the Company has continued so to comply, and will continue so to comply in future.

By order of the board:

Ken Hogg
Chief Executive Officer
28 March 2019

Andrew Richards
Finance Director
28 March 2019

A. BUSINESS AND PERFORMANCE

A.1 Business

A.1.1 Name and legal form

Countrywide Assured plc (CA plc, the company) is a UK based life and pensions business which is substantially closed to new business. The company was established in 1988. CA plc is a public limited company, limited by shares.

A.1.2 Name and contact details of the responsible supervisory authority

CA plc is authorised by the Prudential Regulation Authority ('PRA') and regulated by both PRA and the Financial Conduct Authority ('FCA'). The PRA is also the group supervisor of the insurance group to which CA plc belongs. Contact details for the PRA and FCA can be found on their respective websites:

www.bankofengland.co.uk/pr

www.fca.org.uk

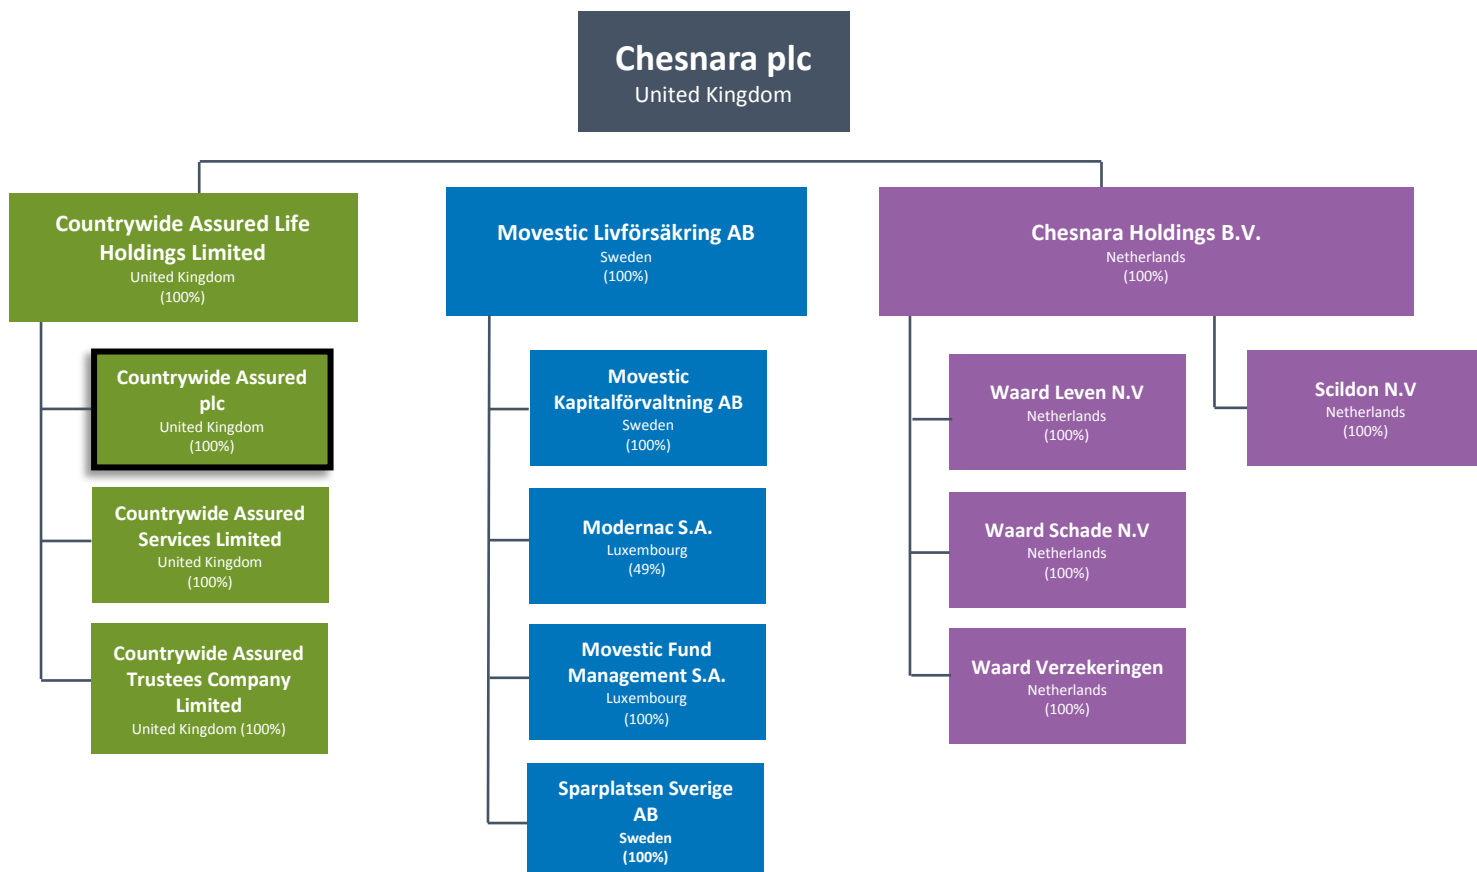

A.1.3 Name and contact details of external auditor

The company's external auditor is Deloitte LLP, Bristol, United Kingdom.

Deloitte LLP is the company's appointed external auditor, responsible for the audit of the company's IFRS financial statements. Previously, Deloitte were also responsible for the audit of this report, however this is no longer the case as the company has utilised an exemption from the requirement to have the SFCR audited, which was applied in 2018 following new rules issued by the PRA.

A.1.4 Shareholders and position within the group

CA plc is a member of the group headed by Chesnara plc. The group organisational structure shown below is as at 31 December 2018, with the position of CA plc highlighted.

The company is limited by shares, 100% of which are owned by Countrywide Assured Life Holdings Limited, which in turn is 100% owned by Chesnara plc, the ultimate parent company of the CA plc.

A. BUSINESS AND PERFORMANCE (CONTINUED)

A.1 Business (continued)

A.1.5 Material lines of business and material geographical areas where business is carried out

Management segments

The principal activity of CA plc consists of the servicing of long-term life insurance and pensions business, which is substantially closed to new business. It comprises four life and pensions portfolios which have been acquired over time, as follows:

- ‘CA’: This represents the original life and pensions business of the company, which was previously part of the Countrywide plc estate agency group;
- ‘CWA’: This represents business that was transferred into Countrywide Assured plc under Part VII of the Financial Services and Markets Act 2000 (FSMA) from City of Westminster Assurance Company Limited. City of Westminster Assurance Company Limited was purchased by the Chesnara group in 2005;
- ‘S&P’: This represents the business that was transferred into Countrywide Assured plc under Part VII of FSMA during 2011 from Save & Prosper Insurance Limited (SPI) and Save & Prosper Pensions Limited (SPP). The two companies were purchased by the Chesnara plc group in 2010; and
- ‘PL’: This represents the business that was transferred into Countrywide Assured plc under Part VII of FSMA on 31 December 2014. The company was purchased on 28 November 2013 from Direct Line Insurance Group plc by the Chesnara plc group.

As these historical books of business are all substantially closed to new business; the primary focus of management is a well-governed and efficient run-off of the existing life and pensions portfolios.

The company consists of two material reporting segments being CA and S&P, and these segments are used for reporting internally. The CA segment includes the ‘CA’, ‘CWA’ and ‘PL’ books of business.

CA segment: This consists of index-linked and unit-linked insurance which makes up the vast majority of life insurance business managed by CA plc. The business mainly consists of endowment contracts and whole life assurance contracts, and also includes some term assurance, annuity and health insurance contracts. This segment also contains some with-profits business, which is 100% re-insured with ReAssure Limited (ReAssure).

S&P segment: This consists mostly of life and pension business. Some of this business is with-profits in nature. There are maturity guarantees on all of this with-profits business, either guaranteed minimum pensions or guaranteed minimum fund values. This segment also contains index-linked and unit-linked insurance.

Solvency II lines of business

Solvency II introduces some pre-defined “lines of business”. The table below provides some insight into the types of insurance the company has written, as classified on a Solvency II basis, and how these map across to the reporting segments used by the company to manage the business. The company only has policies classified as Life Insurance Obligations and there are no Non-Life Insurance Obligations. All business is within the United Kingdom.

2018 Line of business	Technical provisions, net of reinsurance (SII basis)			Premiums earned, net of reinsurance (IFRS basis)		
	Total £'000	CA £'000	S&P £'000	Total £'000	CA £'000	S&P £'000
Life insurance						
With-Profits insurance business	286,083	–	286,083	1,514	2	1,512
Index-linked and unit-linked insurance	1,520,257	835,742	684,515	13,495	11,625	1,870
Other life insurance	140,654	140,654	–	9,841	9,757	84
Total life insurance	1,946,994	976,396	970,598	24,850	21,384	3,466
Health insurance						
Health insurance (direct business)	210,991	210,991	–	12,384	12,384	–
Total health insurance	210,991	210,991	–	12,384	12,384	–
Total	2,157,985	1,187,387	970,598	37,234	33,768	3,466

A. BUSINESS AND PERFORMANCE (CONTINUED)

A.1 Business (continued)

A.1.5 Material lines of business and material geographical areas where business is carried out (continued)

Solvency II lines of business (continued)

2017 Line of business	Net technical provisions (SII basis)			Net premiums earned (IFRS basis)		
	Total £'000	CA £'000	S&P £'000	Total £'000	CA £'000	S&P £'000
Life insurance						
With-Profits insurance business	304,434	-	304,434	1,765	2	1,763
Index-linked and unit-linked insurance	1,783,586	977,561	806,026	15,882	13,875	2,007
Other life insurance	148,984	148,984	-	10,930	10,824	106
Total life insurance	2,237,004	1,126,545	1,110,460	28,577	24,701	3,876
Health insurance						
Health insurance (direct business)	241,733	241,733	-	13,938	13,938	-
Total health insurance	241,733	241,733	-	13,938	13,938	-
Total	2,478,737	1,368,278	1,110,460	42,515	38,639	3,876

* Net premiums earned as reported in the above table reflect premiums received on all policies in force during the year. This includes premiums on certain unit-linked savings and pensions policies that are categorised as "investment contracts" for IFRS reporting purposes in the company's Annual Report & Accounts. Where products are classified as "investment contracts" for IFRS reporting purposes the premiums received on such products are "deposit accounted" for, which means the premiums are not reported in the income statement. Consequently the premiums reported above do not agree to those reported in the company's 2018 IFRS financial statements.

The underwriting performance in section A.2.2 has been analysed by business segment as opposed to the Solvency II lines of business.

A.1.6 Product mix within the material line of business

Insurance with profit participation: Most of the with-profits business resides in the two ring-fenced with-profits funds – Save & Prosper Insurance WP and Save & Prosper Pensions WP. There are maturity guarantees on all of this business, either guaranteed minimum pensions or guaranteed minimum fund values. There is also some with-profits business in CA, which is 100% re-insured with ReAssure.

Index-linked and unit-linked insurance: This makes up the vast majority of life insurance business managed by CA plc and encompasses products held in the CA, CWA and S&P books of business. Approximately two thirds of this is pensions business primarily made up of individual contracts, with some group money purchase schemes. The life business mainly consists of regular premium-paying endowment contracts with a small number of single premium endowments and whole life assurance contracts.

Other life insurance: This primarily relates to the CA, CWA and PL books of business and mainly includes a mixture of term assurance, annuity, endowment and whole life assurance contracts.

Health insurance: The vast majority of health insurance business sits in the CA book of business and covers contracts for which the future benefits are primarily or wholly relating to health. Product types include critical illness and income protection contracts with most of these being index-linked in nature.

A. BUSINESS AND PERFORMANCE (CONTINUED)

A.1 Business (continued)

A.1.7 Significant business or other events that have occurred over the reporting period

The company analyses its significant business developments against its strategic objectives and associated areas of management focus. This can be summarised in the diagram below:

Strategy	Efficient run off of the existing life and pensions portfolios				
Management focus:	Capital and value management	Customer outcomes		Governance	
	Culture & values				
	Responsible risk-based management	Fair treatment of customers	Competitive return to shareholder	Robust regulatory compliance	Maintain adequate financial resources

In addition to considering its solvency position, the company also adopts performance measures to assess its financial position and performance. The measures, as detailed below, have at their heart the Solvency II valuation known as Own Funds.

Economic Value

Economic Value (EcV) is deemed to be a meaningful measure of the long term value of the company and it generally approximates to Embedded Value reporting, which was used before the introduction of SII. EcV is derived from Solvency II Own Funds and recognises the impact of future profit expectations from existing business.

Cash generation

Cash generation is a measure of how much distributable surplus has been generated in the period, which supports the ability of the company to pay dividends. It is driven by the change in solvency surplus on a SII basis, taking into account board-approved capital management policies.

An update on progress against each category of management focus has been provided below:

Strategic focus

Area of focus	Summary for 2018
Capital and value management	<ul style="list-style-type: none"> – Cash generation of £55.8m emerged during the year despite volatile equity markets. – The above figure includes £26.8m of surplus capital which was released from the company's with-profit funds following approval by the Financial Conduct Authority. – Proposed final dividend of £59.0m. – Excluding dividends paid, the EcV of the division reduced by £8.0m since the start of the year, largely as a result of the fall in equity markets since the start of the year. – IFRS pre-tax profits of £28.2m have been made in the year.
Customer outcomes	<ul style="list-style-type: none"> – On 19 September 2018 the FCA announced that it had closed its investigation, without further action, into whether CA had failed to meet the standards expected of it regarding the fair treatment of long-standing customers. – The division's customer strategy implementation plan has continued to be progressed during the year. Key items of delivery include: <ul style="list-style-type: none"> ○ Reviewing key event communications with customers and making sure they meet the expected standards. New transfers and surrender letters were implemented for some parts of the business in the year. Further enhancements will continue into 2019. ○ The CA website was updated at the start of 2018 to improve the accessibility of information that customers may wish to refer to. A second phase roll-out to provide more information on fund unit prices and performance was progressed during 2018 and went live on 24 February 2019. – The business has continued its programme to stay in touch with customers through its "goneaways" programme.
Governance	<ul style="list-style-type: none"> – CA has taken initial steps in commencing a programme to enhance its operational resilience following the Bank of England's paper entitled "Building the UK financial sector's operational resilience" which was issued in July 2018. – The division's IFRS 17 programme commenced, with the first phase involving an impact assessment focusing on the operational, technical and financial impact of the standard. This work has been utilised to scope the delivery phase of the plan, which has now commenced. – Positive engagement with all regulators has continued during the year. – During the year an external quality assessment was undertaken of the internal audit function. This gives an external view of the current internal audit arrangements and benchmarked them against industry practice and peers. A draft report has been provided by the external firm performing the review and is currently being considered by the Audit & Risk Committee. Once finalised the committee will oversee the implementation of any relevant actions in response to the observations arising from the review.

A. BUSINESS AND PERFORMANCE (CONTINUED)

A.1 Business (continued)

A.1.7 Significant business or other events that have occurred over the reporting period (continued)

Culture and values:

Area of focus	Summary for 2018
Responsible risk-based management	<ul style="list-style-type: none"> - Continued to enhance our Own Risk and Solvency Assessments (ORSAs), further supporting the business in making informed risk-based decisions. - Performed the annual review of the effectiveness of the company's systems of governance. This considered a number of areas of the overall system of governance including its completeness, effectiveness (including attestations over the application of policies throughout the year), its use and the overall culture. This concluded there were no major areas of concern.
Fair treatment of customers	<ul style="list-style-type: none"> - Continued to deliver a good standard of customer service as evidenced by research. - Delivering the customer strategy implementation plan in support of regulatory guidelines and during 2018 delivered a new customer website and enhanced customer communications. - The UK's administrative outsource service partners have delivered within stringent service level requirements. - Where complaints do arise, we continue to manage them in accordance with best regulatory practice. - We closely monitor any regulatory developments to ensure we continue to treat our customers fairly in accordance with regulatory requirements. - Continued to undertake product reviews to check the company is treating customers fairly.
Competitive return to shareholder	<ul style="list-style-type: none"> - Delivered against our objectives in the year of making sound risk-based decisions across all aspects of the business, which supported the emergence of solvency surplus broadly in line with plans. This has enabled the board to propose a year end dividend of £59.0m.
Robust regulatory compliance	<ul style="list-style-type: none"> - Continued to stay abreast of, and responded to as appropriate, all publications issued by our primary regulators, the FCA and PRA. - Supported the work performed by the FCA in relation to its investigation into the disclosure of exit fees in customer correspondence, with the investigation having been closed in the year with no further action. - Ensured that our multi-year customer strategy implementation plan fully reflects the most recent publications by the FCA on treating customers fairly. - Compliance with requirements of the Senior Manager & Certification Regime, effective 10 December 2018, and prior to that the Senior Insurance Managers Regime. - During the period we have delivered our GDPR readiness programme, with the new rules effective from 25 May 2018.
Maintain adequate financial resources	<ul style="list-style-type: none"> - The company has maintained strong financial resources over the year, and had a post-dividend solvency ratio of 130% at 31 December 2018. The dividend paying limit is set at 120% at which point the dividend would cease to be paid. Further information on the solvency position of the company at 31 December 2018 can be found in Section E "Capital management", which starts on page 50.

A. BUSINESS AND PERFORMANCE (CONTINUED)

A.2 Underwriting performance

A.2.1 Introduction

Sections A.2, A.3 and A.4 of this report require qualitative and quantitative information to be provided on various different aspects of the performance of the company. Whilst this report in general provides information that is based on valuation rules required by the Solvency II reporting regime, sections A.2, A.3 and A.4 are required to be reported in accordance with the measurement basis as shown in the company's financial statements, which in CA plc's case is IFRS. The disclosure rules of Solvency II require this information to be analysed by material line of business, as defined by the Solvency II rules. However, the business is managed by business segment rather than line of business, and the information below is based on this analysis.

A.2.2 Underwriting performance

The company has interpreted underwriting performance as being the IFRS profit before tax, as reported in the company's financial statements.

The table below summarises the underwriting performance of CA plc by business segment. All business was written in the United Kingdom.

2018	Total £'000	CA £'000	S&P £'000
Premiums earned	37,234	33,768	3,466
Claims incurred	(241,800)	(150,393)	(91,407)
Changes in other technical provisions	328,863	174,114	154,749
Expenses incurred	(24,101)	(14,548)	(9,553)
Other expenses	1	1	–
Investment performance (section A.3 for detail)	(112,959)	(48,999)	(63,960)
Other operating income	12,792	2,333	10,459
Fee & commission income	28,142	25,573	2,569
Underwriting performance (IFRS profit before tax)	28,172	21,849	6,323

2017	Total £'000	CA £'000	S&P £'000
Premiums earned	42,515	38,639	3,876
Claims incurred	(250,906)	(154,984)	(95,922)
Changes in other technical provisions	(11,063)	7,350	(18,413)
Expenses incurred	(23,999)	(13,973)	(10,026)
Other expenses	(5)	(1)	(4)
Investment performance (section A.3 for detail)	251,040	115,327	135,713
Other operating income	13,985	2,575	11,410
Fee & commission income	29,004	26,537	2,468
Underwriting performance (IFRS profit before tax)	50,571	21,469	29,102

Premiums earned: This represents the sum of gross premiums during the year reduced by the amount ceded to reinsurance undertakings. Deposit accounting has not been performed.

Claims incurred: This is the sum of the claims paid and the change in the provision for claims outstanding during the financial year, net of reinsurance.

Changes in other technical provisions: This represents the changes in provisions, net of reinsurance, for policyholder liabilities. These have been calculated using actuarial methods. The reduction compared to prior year is largely due to market volatility.

Expenses incurred: This represents all technical expenses incurred by the company during the year, on an accruals basis.

Other expense: Other technical expenses including amounts payable under profit sharing arrangements.

Investment performance: Further detail on investment performance can be found in section A.3 of this report. Investment performance includes a combination of interest / dividend income on assets held and realised and unrealised gains and losses.

Other operating income: This line item mainly consists of other investment related income.

Fee and commission income: This represents policy-based fees, fund management-based fees and benefit-based fees.

A. BUSINESS AND PERFORMANCE (CONTINUED)

A.2 Underwriting performance (continued)

A.2.3 Overall results commentary

The overall underwriting performance of the company reflects surpluses arising from the company's life and pensions contract portfolios, which have remained resilient to policy attrition. The underwriting result of £28.2m (2017: £50.6m) comprises £21.8m (2017: £21.5m) from the combined CA, CWA & PL portfolios, and £6.2m (2017: £29.1m) from the S&P book.

During 2018 the company has reported lower profits than in the prior year. The year on year movement emerges within the more variable S&P book. This is mainly reflective of the positive economic factors in 2017 which have not been repeated in the current period, resulting in overall economic profits being circa £23m lower year on year. Operating profits of £27.1m are in line with the prior year.

A.3 Investment performance

A.3.1 Investment performance

The investment performance of the company can be summarised in the below table:

2018	Total £'000	CA £'000	S&P £'000
Dividend income	29,969	21,591	8,378
Interest income	16,486	8,554	7,932
Rental income from investment properties	7	7	-
Net fair value gains and losses:			
Equity securities designated as at fair value through income on initial recognition	(129,509)	(69,274)	(60,235)
Debt securities designated as at fair value through income on initial recognition	(26,694)	(9,879)	(16,815)
Derivative financial instruments	(3,220)	-	(3,220)
Total	(112,961)	(49,001)	(63,960)

2017	Total £'000	CA £'000	S&P £'000
Dividend income	27,163	21,088	6,075
Interest income	17,867	9,702	8,165
Rental income from investment properties	10	10	-
Net fair value gains and losses:			
Equity securities designated as at fair value through income on initial recognition	194,610	82,861	111,749
Debt securities designated as at fair value through income on initial recognition	4,880	1,667	3,213
Derivative financial instruments	6,511	-	6,511
Total	251,041	115,328	135,713

A poor investment performance is predominantly driven by the decline in the equity markets during the last quarter of 2018. The movement in the FTSE 100 and FTSE All Share is shown below. This does not show the fluctuations between these dates but gives an indication of the movement year on year:

	31 December 2017	31 March 2017	31 June 2018	31 September 2018	31 December 2018
FTSE 100	7,687	7,057	7,634	7,510	6,728
FTSE All Share	4,222	3,894	4,202	4,128	3,675

A. BUSINESS AND PERFORMANCE (CONTINUED)

A.3 Investment performance (continued)

A.3.2 Investment in securitisation

The company does not invest directly in securitised assets. CA plc does, however, have exposures to securitised assets within the Save & Prosper Pension (SPP) with-profits fund via the fund's investments in certain collective investment schemes. These schemes, as part of their overall portfolio of investments, include some holdings in securitised assets. As at 31 December 2018, out of a total CA plc investment portfolio of £2,421m (2017: £2,826m), £1.5m (2017: £1.6m) was invested in securitised assets via the holdings in these collective investment schemes.

A.4 Performance of other activities

The company's only activity is that of life insurance and pension business. There are no other activities that take place in the company.

A.5 Any other information

There is no other information required to be disclosed regarding the performance of the business.

B. SYSTEM OF GOVERNANCE

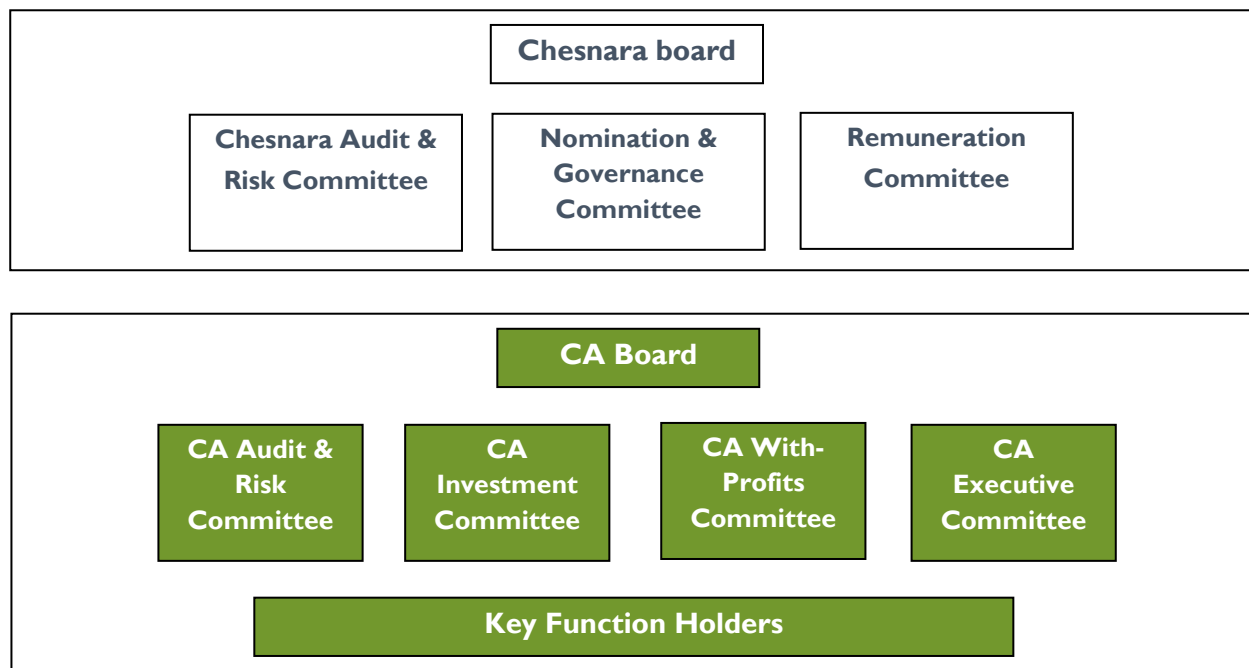

B.1 General information on the system of governance

B.1.1 Governance structure

Overview

CA plc's governance system sits within the overarching governance system of the Chesnara group. It consists of the board, board committees and the delegation of responsibilities to key function holders. CA plc maintains a Responsibilities Map which documents the detailed implementation of the system of governance. This includes the terms of reference of committees, and detailed roles and responsibilities of key functions.

The governance structure is summarised in the diagram below:

Board responsibilities

The CA plc board is made up of both executive directors and non-executive directors. It is collectively responsible for promoting the success of the business by directing and supervising its activities. Its role is to deliver appropriate outcomes for all stakeholders within a framework of prudent and effective controls, which enable risks to be assessed and managed. It will set the strategy and business plan within the overall context of the company's plans and ensure that the necessary financial and human resources are in place to meet its objectives and monitor management performance.

Sub-committees

The board has additional sub-committees as follows:-

- **Audit & Risk Committee:** The responsibilities of the committee include monitoring the integrity of the annual financial statements, reviewing the definition and application of the company's internal control and risk management systems, monitoring the use of capital within the company, reviewing and challenging risk information and treatment, and reviewing the risk management responsibilities across the company.
- **Investment Committee:** Responsibility for the review of the company's investment strategy and policy and to monitor and challenge investment performance. This includes setting investment strategy that is appropriate for shareholder and policyholder needs and the company's risk appetite, overseeing implementation and performance of the shareholder and policyholder funds and ensuring that shareholder and policyholder investment governance frameworks are effective.
- **With-Profits Committee:** Responsibility for ensuring that the interests of with-profits policyholders are appropriately considered within governance arrangements and to consider issues affecting with-profits policyholders as a whole or as separately identifiable groups. Other responsibilities include ensuring that management of the with-profits business is carried out in accordance with the Principles and Practices of Financial Management (PPFM) and that the with-profits policyholders are being treated fairly and that conflicts of interest between policyholders and shareholders are effectively addressed.
- **Executive Committee:** This is the principal body to assist the Chief Executive Officer ('CEO') in carrying out the responsibilities assigned by the board. The responsibilities include: recommending strategy and objectives for the company having regard to the interests of policyholders, its ultimate shareholder Chesnara and other stakeholders; developing and reviewing objectives, plans and budgets for approval by the board; reviewing business performance against agreed targets; ensuring the control, co-ordination and monitoring of capital, risk and internal controls; implementation and review of the risk management system and risk policies; monitoring the on-going capital and liquidity position of the company. From time to time, the executive committee may appoint sub-committees to provide a focus on specific areas or parts of the business plan.

B. SYSTEM OF GOVERNANCE (CONTINUED)

B.1 General information on the system of governance (continued)

B.1.1 Governance structure (continued)

The board has delegated its remuneration and nomination responsibilities to the relevant Chesnara plc committees as follows:

- **Chesnara board Remuneration Committee:** Responsible for ensuring that the remuneration practices are appropriate. It is responsible for the development and implementation of the group remuneration principles and practices across each of the divisions (including CA plc) and determining targets for performance-related incentive schemes. CA plc maintains a remuneration policy, which is based on the principles and practices set by the group. This is covered in more detail in Section 1.3 below.
- **Chesnara board Nominations and Governance Committee:** The role of the Nominations and Governance Committee is to ensure appointments are appropriate and that board members and executive committee members are 'fit and proper'. It is responsible for the development and implementation of the group fit and proper policy across each of the divisions (including CA plc) and for determining criteria for skills, knowledge, and experience. The Nominations and Governance Committee is responsible for succession planning for board and senior executive roles across each of the divisions. CA plc maintains a fit and proper policy, which is based on the principles and practices set by the group. This is covered in more detail in Section 2 below.

Senior management responsibilities

To assist the board with its responsibilities, it has delegated the responsibility for key functions to senior management. These are functions that have a material effect on the internal control of the business and influence material decision making. The key functions have been defined taking into account the requirements of Solvency II regulations and guidance from regulators. Each key function is headed by a key function holder who has responsibility for that area. The key functions are as follows:

- Risk management;
- Compliance;
- Internal audit;
- Actuarial;
- Operations;
- Finance; and
- Investments.

Each key function holder is a member of the Executive Committee. As well as reporting to the Executive Committee on a monthly basis, each key function holder prepares a report to the board on a quarterly basis.

The detailed responsibilities for each key function holder are documented in the company's Responsibilities Map which is reviewed and approved by the board on a regular basis. This ensures that each key function holder has the necessary authority and operational independence to carry out their role. On an annual basis, as part of the business planning process, each key function holder will ensure that they have the necessary resources to deliver their responsibilities. The business plan is reviewed by the executive committee and approved by the board.

The responsibilities of each of the key function holder, together with the responsibilities of the Chief Executive Officer ('CEO') and With Profits Actuary are summarised below.

- The CEO is a member of the board, chairs the Investment Committee and the Executive Committee and attends the Audit & Risk and With-Profits Committees. The CEO's main responsibilities include: delivering the company's business plan, and operating within the company's budget, as approved by the board; managing the business within the CA plc and group's risk appetite parameters and; meeting the requirements of the regulators in relation to all activities within the company.
- The Finance Director is a member of the board and the Executive Committee and attends the Audit & Risk Committee. The Finance Director oversees all financial aspects of the CA plc strategy and financial management and ensures the flow of financial information to the CA and group CEOs, the CA and group Executive Committees, the CA and Chesnara boards and, where necessary, external parties such as auditors and regulators. In addition the Finance Director is responsible for the day to day control of the accounting function including effective oversight and governance of outsourced accounting services.
- The Chief Risk Officer (CRO) attends the Audit & Risk Committee, is a member of the Executive Committee and is a regular attendee at the board. The CRO also has responsibility for the development and review of the risk management, governance and internal control systems; implementation of risk management processes and systems and; reporting on the risk profile of the business, preparation and presentation of the Own Risk and Solvency Assessment (ORSA).
- The Chief Actuary attends meetings of the board and Audit & Risk Committee and is a member of the Investment, With Profits and Executive Committees. The Chief Actuary oversees all actuarial aspects of company's strategy and financial management. This includes oversight of the appropriateness of methodologies, models, bases and calculation of technical provisions within CA including those provided by the outsourcers; assessment of the sufficiency and quality of the data used in the calculation of technical provisions; reports on the reliability and adequacy of the calculation of technical provision; advises of any concerns regarding the sufficiency of financial assets to meet liabilities to policies; models of risk capital for the ORSA, including advising on suitable stress and scenario testing; reinsurance arrangements; and provide oversight of investment strategy and asset-liability matching. The Chief Actuary is also the Head of Investments (see below).
- The Head of Internal Audit reports directly to the Chair of the Audit & Risk Committee and is responsible for providing reasonable, but not absolute, assurance to the board and the Audit & Risk Committee about the adequacy and effectiveness of the internal control environment including procedures, controls and policies operated by outsourced service providers and for the establishment of an annual audit plan.

B. SYSTEM OF GOVERNANCE (CONTINUED)

B.1 General information on the system of governance (continued)

B.1.1 Governance structure (continued)

Senior management responsibilities (continued)

- The Head of Compliance, Legal and Government Affairs is responsible for ensuring that the company fulfils its regulatory, legislative and corporate standards and obligations in a cost effective way, and for assessing the adequacy of measures taken to prevent non-compliance. The Head of Compliance, Legal and Government Affairs is also the Data Protection Officer and the Money Laundering Reporting Officer.
- The Head of Operations is responsible for ensuring an appropriate customer strategy is implemented and maintained, and that outsourced administration services are delivered to the agreed service levels, quality standards and contractual terms. The Head of Operations is also responsible for HR services, IT and office facilities to the company's employees.
- The Head of Investments has responsibility for implementing the policies and practices agreed by the Investment Committee, oversight of the unit pricing, and advising the Investment Committee of matters they need to be aware of when undertaking their role, such as changes to market practice or regulation.
- The With Profits Actuary reports to the Chair of the With-Profits Committee and is responsible in advising on key aspects of discretion affecting the with profit funds, advising the board whether assumptions used to calculate the future discretionary benefits within the technical provisions are consistent with the relevant principles and practices from the financial management and reporting, at least annually to the board key aspects of the discretion exercised in respect of the with profits funds. The With-Profit actuary is employed by Willis Towers Watson and the services provided under a separate service agreement.

B.1.2 Material changes in the system of governance

There have been no material changes to the system of governance over the year.

B.1.3 Information on the remuneration policy

Overview

The company's remuneration policy is intended to set out rules and principles for remuneration, taking into account relevant regulatory requirements and guidance. In particular, it aims to ensure:

- the implementation of appropriate remuneration practices and activities; and
- the implementation of suitable reporting and monitoring routines, to ensure effective control of remuneration activities and management of the associated risks.

The remuneration package for CA plc staff, including members of the Executive Committee is composed of fixed and variable elements. Fixed remuneration refers to remuneration, the amount and size of which is determined in advance and consists of (a) basic salary; (b) taxable benefits; and (c) pension benefits. Variable remuneration refers to remuneration, the amount or size of which is not determined in advance and consists of an annual bonus scheme for all employees.

The annual bonus schemes in place for employees have the following features:

	Senior management scheme		Staff scheme	
	On target	Maximum	On target	Maximum
Personal performance	10.0% - 30.0%	12.5% - 37.5%	7.5%	10.0%
Company performance	10.0% - 30.0%	16.7% - 50.0%	7.5%	12.5%
Total	20.0% - 60.0%	29.2% - 87.50%	15.0%	22.5%

Percentages in the table above represent the proportion of the basic salary that could be paid as variable remuneration.

The remuneration package for non-executive directors (NEDs) is fee-based. A base fee is paid to all NEDs, and an additional fee is paid to the chairs of the board committees and to other NEDs to reflect additional time commitments and responsibilities required by their role.

CA plc has identified the individuals to whom specific arrangements will be applied, in line with the Solvency II Delegated Acts, Article 275, and the policy reflects a proportional interpretation of paragraph 2 of Article 275. The regulations require firms to apply specific arrangements to 'the administrative, management or supervisory body, persons who effectively run the undertaking or have other key functions and other categories of staff whose professional activities have a material impact on the undertaking's risk profile' ("Solvency II staff"). These individuals consist of members of the board and the Executive Committee. The latter includes all key functions holders. Material risk takers are considered to be persons who either individually via their authority level or collectively through the auspices of the board or Executive Committee are able to make decisions which could materially impact the risk appetite of the business. There are currently no individuals who are not members of the board or Executive Committee, who have this level of authority, nor do the board plan to provide such authority, subject to ongoing review.

B. SYSTEM OF GOVERNANCE (CONTINUED)

B.1 General information on the system of governance (continued)

B.1.3 Information on the remuneration policy (continued)

Business strategy consistency

The company recognises that remuneration practices and principles influence the management of the business and desires that its practices promote sound, prudent and effective management of its business and does not encourage risk-taking that exceed the risk tolerance limits of the company.

The company recognises that its remuneration policies and schemes are essential to attract, motivate and retain high calibre resource with the required skills and experience needed for their role and to contribute to the success of the company. Its remuneration objectives, consistent with the business strategy, are:

- To drive and reward the achievement of the business strategy and plan;
- To promote sound and effective risk management and not encourage risk-taking that exceeds the risk tolerance limits of the undertaking;
- To recruit and retain employed individuals with the skills and experience needed for the role and to contribute to the success of CA plc; and
- To recruit and retain independent consultants and/or contractors with the skills and experience and qualities relevant to the role and who are also able to fulfil the required time commitment.

In addition, CA plc's variable remuneration is closely aligned to the performance of the individual and the company.

B.1.4 Material related party transactions

The below provides information on transactions that the company has entered into during the year with shareholders, persons who have significant influence and members of the board.

Transactions with ultimate parent company, Chesnara plc

Chesnara plc undertakes centralised administration functions, the costs of which it charges back to its operating subsidiaries. The following amounts, which effectively comprised a recharge of expenses, were charged to the company for the respective periods.

	2018	2017
	£'000	£'000
Recharged group expenses	3,926	3,272

Transactions with immediate parent company

Countywide Assured Life Holdings Limited (CALHL) is the immediate parent company of CA plc. Typically the only transactions between CA plc and CALHL are the remittance of annual dividends. The dividend payments made during 2018 and 2017 are summarised in the table below.

	2018	2017
	£'000	£'000
Dividends paid to CA Life Holdings Limited	32,000	30,000

Further to the dividend payments made in the year of £32.0m, CA plc has declared a dividend of £59.0m in relation to the year ended 31 December 2018, which is due to be paid during 2019.

Transactions with fellow subsidiary companies

Countywide Assured Services Limited, a subsidiary company, undertakes centralised supplier payment and administration functions, the costs of which it charges back to CA plc. The following amounts which effectively comprised a recharge of expenses at a mark-up of one quarter of a percent were charged to the company for the respective periods.

	2018	2017
	£'000	£'000
Recharge of expenses from CA Services Limited	2,930	2,615

Other transactions

There were no transactions between the company and any persons who exercise a significant influence on the company, or who are members of the administrative, management or supervisory body. Members of the board are remunerated by Chesnara plc, and recharged on an appropriate basis.

B. SYSTEM OF GOVERNANCE (CONTINUED)

B.1 General information on the system of governance (continued)

B.1.5 Assessment of the adequacy of the system of governance

The company does not have a premium listing of equity shares and is not therefore required to comply with the UK Corporate Governance Code (the Code); however, the board endeavours to follow the principles laid out in the Code where practically possible and appropriate in order to promote high standards of corporate governance. In line with this, the board is responsible for monitoring the Risk Management and Internal Control System and carrying out a review of its effectiveness on an annual basis. In addition, SII regulations require the System of Governance to be subject to regular internal review.

On an annual basis CA plc undertakes a review of the effectiveness of the System of Governance, including the Risk Management and Internal Control System. This activity includes: (a) the board's perspective on the adequacy of the System of Governance including the Risk Management and Internal Control Systems; and (b) an objective 'bottom up' assessment of the adequacy of each of the individual components. The board has discretion over the scope and terms of the Systems of Governance review each year. For example, the board may choose to use Internal Audit, or external review.

The assessment considers the extent to which the risk management system is embedded, risks are reported to the Audit & Risk Committee, and the assessment also helps inform its future development.

As a result of the review undertaken in 2018, the board concluded that the company had adequate systems of governance in place over the year.

B.2 Fit and proper requirements

CA plc has a fit and proper policy that has been signed off by the board and ensures that appropriate resource is in place to deliver effective and efficient management of the business. The company takes appropriate steps to ensure that directors, senior managers, individuals responsible for key functions and those working in key functions are fit and proper.

The requirements are proportionate to the role and responsibilities of the various positions. Checks are made on initial appointment and are re-assessed every year. The results of all assessments are reported to the board. During 2018, all employees were assessed against appropriate fit and proper tests. These tests included some or all of the following:

- Fit and proper questionnaires;
- Criminal record checks;
- Credit referencing;
- Curriculum Vitae detailing skills, qualifications and experience;
- Continuous professional development / performance management framework;
- Membership of professional institutes; and
- The recruitment and selection process in place at the time of appointment.

Each year personal performance assessments include a review of fitness and propriety of all employees, senior managers and directors. CA has complied with the requirements of the Senior Manager & Certification Regime, effective 10 December 2018, and prior to that the Senior Insurers Managers Regime. The company notifies the Financial Conduct Authority and Prudential Regulation Authority of any changes to the identity of the persons responsible for the Senior Manager Functions along with all the information needed to assess whether any new persons appointed to these roles are fit and proper. The fit and proper policy is transparent and made available to all employees to ensure that all decisions made on the fitness and propriety of an individual are made in a consistent manner.

B. SYSTEM OF GOVERNANCE (CONTINUED)

B.3 Risk management system including the own risk and solvency assessment

B.3.1 Risk management system

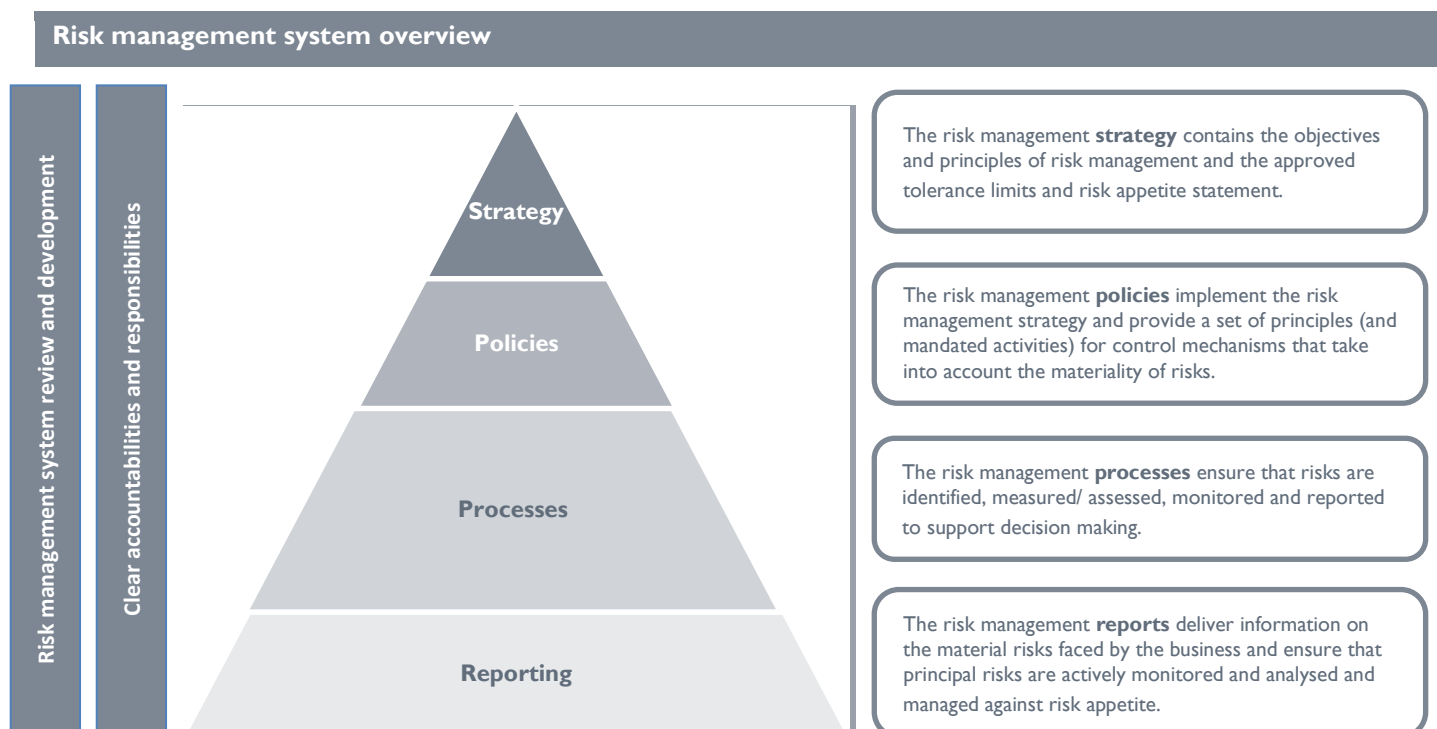

Overview

CA has an established risk management system, which incorporates:

- (a) Risk management strategy;
- (b) Risk management and internal control policies;
- (c) Risk management processes; and
- (d) Risk reporting.

The risk management system applies to all categories of risk, and unless stated otherwise, the following information applies for each separate risk category.

The risk management system is summarised in the diagram below:

B. SYSTEM OF GOVERNANCE (CONTINUED)

B.3 Risk management system including the own risk and solvency assessment (continued)

B.3.1 Risk management system (continued)

Risk universe

CA plc has a defined categorisation of risks that are relevant to its business model and strategic focus, as shown in the following diagram. The company recognises that risks within each of these categories need to be identified, measured, monitored, managed and reported upon on a continuous basis.

Insurance	Market & liquidity risk	Counterparty default risk	Strategy	Strategic - acquisitions	Operational	Information security
Expense	Interest Rates	Reinsurer	Design	Capability	Conduct	Infrastructure failure
Mortality	Equity	Outsourcer	Execution	Execution	Regulatory breach	Cyber attack
Morbidity	Property	Supplier	External change	Benefit realisation	People	Policyholder data security
Longevity	Credit spread	Bank deposit	Internal change		Execution / process	Corporate data security
Income protection	Market concentration	Corporate			Financial crime	
Disability	Currency	Government (domestic)			Physical resources	
Lapse	Liquidity	Government (non-domestic)			Industry standards breach	
Unemployment	Inter-dependency	Derivative			Business continuity plan failure	
Revision	Reinvestment	Counterparty concentration				
Catastrophe						

Risk management strategy

The primary risk objective of CA plc's risk management system is to:

"Maintain solvency and liquidity of CA plc whilst delivering continuity of business services; fair customer outcomes; and a regulatory compliant service to customers and making dividend payments to Chesnara Plc in line with expectations."

CA plc has a board-approved risk appetite statement and risk tolerance limit for each of the categories of risk. This is fully consistent with and aligned to the Chesnara group's risk appetite statements. The aim of the risk appetite statement and risk tolerances is to enable the board to articulate the amount of risk CA plc is willing to take and provide boundaries to when potentially too much, or too little, risk is being taken. This provides guidance to enable management to take on the "appropriate" risks, and the "appropriate" amount of risk as part of the pursuit of its strategic objectives.

Business decision making

So that all business decisions are risk informed on a forward looking basis, CA plc has established processes so that:

- Forward looking risk analysis is an integral part of business planning;
- Risk assessment is made for all significant change proposals made to the board;
- Risk analysis, including ongoing identification and monitoring of implementation risks is an integral part of project governance; and
- Own Risk and Solvency Assessment is considered at board meeting to consider whether any of the matters discussed, or decisions taken, may have a material impact on the ORSA, or to establish whether further analysis is needed.

B. SYSTEM OF GOVERNANCE (CONTINUED)

B.3 Risk management system including the own risk and solvency assessment (continued)

B.3.1 Risk management system (continued)

Risk management policies

CA plc has risk management policies that are annually reviewed and approved by the board, that cover all the key risks that CA plc is exposed to. These are the:

- (a) Capital management policy;
- (b) Insurance risk policy;
- (c) Asset and liability management policy;
- (d) Investment policy;
- (e) Reinsurance and risk mitigations policy;
- (f) Outsourcer policy;
- (g) Concentration risk policy;
- (h) Liquidity risk policy;
- (i) Operational risk policy;
- (j) Conduct risk policy; and
- (k) Business continuity.

These policy documents clearly articulate the principles and practices for the management of risks including; an articulation of objectives; reporting procedures; roles and responsibilities; and processes and key controls in a manner that is consistent with the business strategy.

In addition to the policies listed above, CA plc also has other governance and internal control policies including:

- Remuneration policy;
- Fit and proper policy;
- Conflict of interest policy;
- Reserving policy;
- Data quality policy;
- ORSA policy;
- Assets and liabilities valuation policy;
- Reporting and disclosure policy;
- Information security policy;
- Whistleblowing policy;
- Anti fraud policy;
- Anti bribery and corruption policy; and
- Share dealing policy.

CA plc also has policies covering the activities of the control functions as follows:

- Risk management system policy;
- Actuarial function policy;
- Compliance policy; and
- Internal audit policy.

Risk management processes

CA plc maintains a risk register, which is a comprehensive list of risks and the key controls in place to manage them. The continuous maintenance and updating of the risk register is the responsibility of senior management. This is supported by a quarterly maintenance process and uses the risk universe to ensure completeness of capture. The risk register is considered at both Audit & Risk Committee and executive levels.

In the identification of risks, CA plc considers:

- those risks that management are aware of and understand; and
- those risks that management are aware of but do not yet fully understand because of their changing nature including new risks that emerge during the period and forward looking risks that may emerge in the future.

For each of the risks contained within the risk register, the risk owner makes an assessment of the risks, both with and without controls applied. The assessment is undertaken, both in terms of likelihood and consequences. Consequences of each risk are considered in terms of impact on customer; processes; capital; cash outflow; reputation and regulatory relationship.

On an ongoing basis, CA plc scans the horizon and identifies potential risk events (including political; economic; sociocultural; technological; environmental and legislative) and assesses their proximity and their potential impact. Emerging risks are reviewed on a monthly basis by the Executive team and recorded centrally on an emerging risk log with assigned ownership.

CA has established processes and procedures for the management of crystallised risks, with defined criteria for the escalation of material incidents to the executive and the board. Outsourced service providers report all significant incidents, to the applicable first line function. These are escalated to the executive and board according to the agreed criteria.

B. SYSTEM OF GOVERNANCE (CONTINUED)

B.3 Risk management system including the own risk and solvency assessment (continued)

B.3.1 Risk management system (continued)

Risk management information and communication

CA plc produces regular reports to support the board with its monitoring of the risk management of the business.

- On a quarterly basis, the risk function produces a risk report, which includes information on the principal risks of CA plc, information on any emerging risks, tracking of the risk profile versus risk appetite, information on crystallised risk events and continuous solvency monitoring. The quarterly risk report is reported to the Audit & Risk Committee.
- On an annual basis, or more frequently if required, CA plc produces an ORSA report detailing the qualitative and quantitative results of the own risk and solvency assessment, including stress and scenario testing, and the conclusions drawn from those results. The ORSA is reviewed and approved by the board.
- On an annual basis, or more frequently if required, CA plc produces a report providing information on the adequacy and effectiveness of the risk management system.
- On an annual basis, risk policy owners provide an attestation of policy compliance, with supporting evidence where required. The results of this activity are summarised by the risk function and reported to the Audit & Risk Committee.

Risk management responsibilities

The board is responsible for the adequacy of the design of the risk management system and ensuring it is consistent with the practices defined by the company. All significant decisions for the development of the risk management system are the board's responsibility. This includes developments in risk strategy, developments in risk management policies, and development in risk management tools, methodologies and processes.

The Chief Risk Officer is responsible for providing management information to the board regarding the effectiveness of the risk management system and reporting to the board regarding the risk profile of CA plc. The Chief Risk Officer has direct access to the board.

B.3.2 Process undertaken to conduct an Own Risk and Solvency Assessment

Overview

As referred to in section B.3.1, as part of its risk management framework, CA plc conduct an ORSA. This assessment considers the operating environment and wider risks to which CA plc is exposed and provides a forward looking assessment of the potential risks and capital impacts, within the wider context of the CA plc business strategy.

The aim of the ORSA is to support the board and senior management in making risk-based strategic and operational decisions, as well as understanding the impacts on capital, and potential dividend paying capacity to Chesnara plc, if more extreme scenarios were to occur.

The ORSA follows a defined process, which is documented in the ORSA policy. This policy is reviewed on an annual basis and approved by the board. The ORSA process is described in more detail below, and incorporates several key processes to manage risk and capital.

ORSA – decision making

The output from the ORSA process is an ORSA report, which is produced on an annual basis, or more frequently if there is a material change in the risk profile. The ORSA report is based on outputs from a number of different sub-processes within the wider risk management framework, many of which have been reviewed and approved by the board.

The ORSA report is prepared by the Chief Risk Officer, reviewed by senior management and then reviewed and approved by the board. As a minimum the ORSA report covers all of the areas described in the ORSA process, and includes observations, conclusions and recommendations to assist senior management and the board in business planning, and to support risk-based strategic and operational decisions.

Following approval by the board, the ORSA report is submitted to the Prudential Regulation Authority.

At each meeting the board assesses whether any events have arisen or decisions have been made that would require the ORSA Report to be updated.

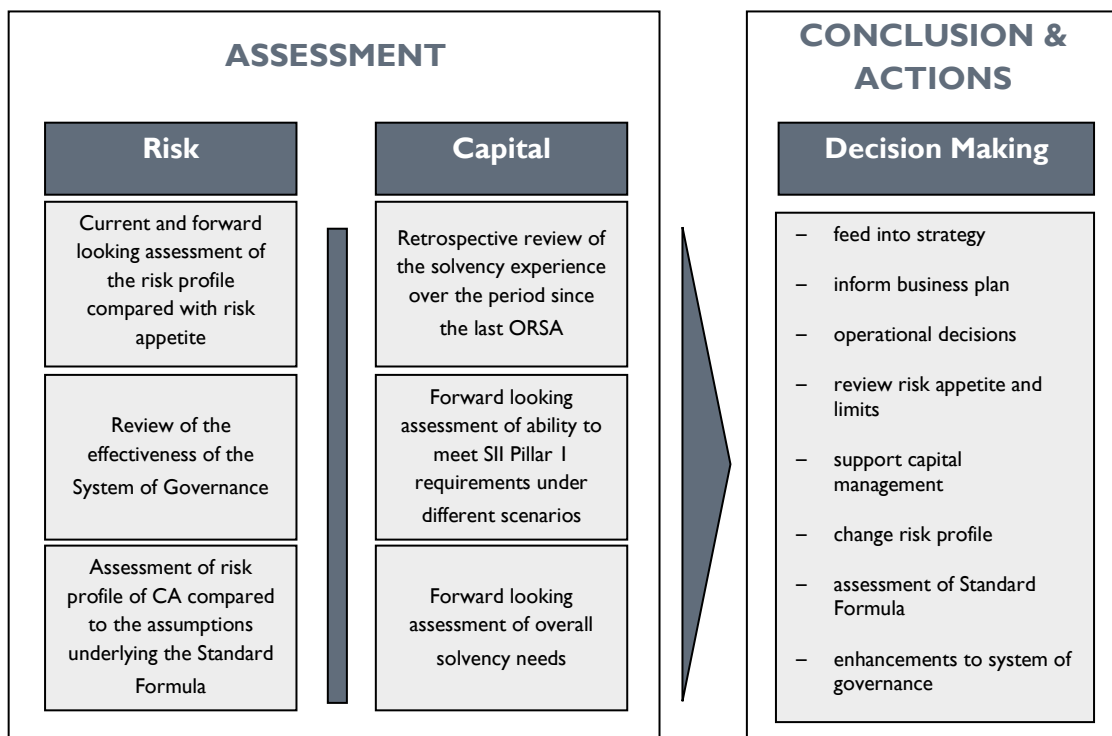

B. SYSTEM OF GOVERNANCE (CONTINUED)

B.3 Risk management system including the own risk and solvency assessment (continued)

B.3.2 Process undertaken to conduct an Own Risk and Solvency Assessment (continued)

ORSA process overview

The following diagram provides a summary of the overall ORSA process.

The above diagram shows how CA plc's risk and capital management activities interact in order to assess its ability to meet regulatory capital requirements, and to determine its overall solvency needs, with the conclusions summarised in the ORSA report to support decision making.

To assess its ability to meet regulatory solvency requirements, the capital position is projected forward taking into account the business plan, dividend payments and the capital management policy. The projections consider the impact of a range of pre-specified stress and scenario tests. The ORSA also considers the results of the reverse stress testing analysis, identifying potential events that could cause the business model to fail.

As part of the assessment to determine its overall solvency needs, the following factors are taken into account:

- **Risk appetite:** Whether the board wishes to hold capital over and above the regulatory risk capital requirements.
- **Limitations within the regulatory calculation of Own Funds:** There may be aspects of the calculation of Own Funds that CA plc would wish to alter for an accurate internal assessment.
- **Appropriateness of the Standard Formula to calculate capital requirements:** Conclusions from the comparison of the risk profile with the assumptions underlying the Standard Formula.
- **Future solvency needs taking account of the business plan:** Whether the solvency projections or sensitivity analysis has resulted in any desire to hold additional capital, taking into account the future business plan and expected dividend paying profile, as well as potential future changes in its risk profile due to the business strategy or other external factors.
- **Non-quantifiable risks:** Whether the board wishes to hold additional capital to allow for risks that are more difficult to quantify, and may not have resulted in explicit capital requirements.
- **Nature and quality of Own Funds:** The nature and quality of Own Fund items or other resources appropriate to cover the risks identified.

B. SYSTEM OF GOVERNANCE (CONTINUED)

B.4 Internal control system

B.4.1 Description of internal control system

CA plc has an established internal control system to support the achievement of CA plc's objectives, in terms of operational effectiveness, reliable financial reporting, and compliance with laws, regulations and policies. CA plc operates a "three lines of defence model" for the management of risks and internal control which is summarised in the diagram below.

The management and control of operational risks is shared with the outsourced service providers. CA plc has adopted a governance model that provides oversight over all three lines of defence of the outsourced service providers.

1st line procedures

The 1st line business functions provide the day-to-day management and control of key business processes. A key component of the internal control system are the risk management policies that are annually reviewed and approved by the board. These set out the principles and practices for the management of risks including roles and responsibilities, reporting procedures and key processes and controls. Each policy is owned by a member of the Executive Committee who is responsible for attesting policy compliance on an annual basis.

B. SYSTEM OF GOVERNANCE (CONTINUED)

B.4 Internal control system (continued)

B.4.1 Description of internal control system (continued)

2nd line procedures

Compliance monitoring

CA plc has an established compliance monitoring procedure. The purpose of compliance monitoring activity is to assess the adequacy of implementation of regulations and legislation into business as usual activity. Material compliance breaches are reported to CA plc's Audit & Risk Committee. The activities of the compliance function are described in more detail in section B.4.2 below.

Actuarial review and verification

CA plc has an established actuarial review procedure. The purpose of the actuarial review activity is to assess the reliability of valuations and calculations of technical provisions. This includes consideration of the methodology and assumptions, an assessment of the information systems used for the valuations systems and an assessment of the quality of the data. The activities of the actuarial function are described in more detail in section B.6 below.

Risk review and challenge

The risk function is responsible for developing the risk management system principles and practices and for reviewing the completeness and appropriateness of risk and control policies (including the identification of risks and effectiveness of controls) and provides oversight to the adherence of line 1 to the agreed standards in the board-approved policies.

3rd line procedures

Internal audit

The 3rd line describes the independent assurance and testing provided by the internal audit function. The activities of the internal audit function are described in more detail in section B.5 below.

Internal control system reporting

The board is responsible for monitoring the internal control system and carrying out a review of its effectiveness. To assist the board in its duties, the board commissions an annual internal control report. This report contains:

- (a) A statement of the adequacy of the risk management and internal controls system;
- (b) Description of the internal control system;
- (c) Description of monitoring and reporting activity undertaken in the reporting period;
- (d) Results of monitoring activity including audit findings and attestations; and
- (e) Description of any significant changes to the control environment over the reporting period.

B.4.2 Implementation of compliance function

Overview

The compliance function is independent and objective in relation to the operational activities of the company and is headed up by the Head of Compliance, Legal and Government Affairs, who acts as the primary contact with the FCA and the PRA.

The Head of Compliance, Legal and Government Affairs ensures that all regular regulatory reporting and ad hoc requests are satisfied within the timescales set.

The compliance function ensures that all employees have an adequate level of compliance knowledge and advises the board on compliance with applicable laws, regulations and administrative provisions that apply to financial services, including those adopted pursuant to the Solvency II Directive. It also includes an assessment of the possible impact of any changes in the legal and regulatory environment on the operations of the undertaking concerned and the identification and assessment of compliance risk.

The Head of Compliance, Legal and Government Affairs is responsible for the identification, measurement and monitoring of the risks that can impact the business in respect of the specific areas of responsibility within the compliance function for example regulatory risk. It ensures that an effective control environment is in place to manage those risks. The regular assessment and reporting of risks are carried out in line with the CA plc risk policy, and reported to the board and the Audit & Risk Committee. The function maintains a compliance plan that provides detail of how the compliance function shall achieve its responsibilities.

B. SYSTEM OF GOVERNANCE (CONTINUED)

B.4 Internal control system (continued)

Reporting lines

The Head of Compliance, Legal and Government Affairs reports directly to the CEO for management purposes, and directly to the board in delivering their role.

Responsibilities

The table below provides a summary of the key responsibilities of the compliance function:

Responsibility	Description
Regulatory reporting	Ensure all regulatory reporting is completed in a timely manner.
PRA meetings and Periodic Summary Meetings	Ensure update meetings take place with the PRA and records are maintained of those meetings.
Conduct Risk review	Oversee the annual review of Conduct Risk measures to ensure fair customer outcomes.
Compliance risk oversight	Identify any compliance-related risks and ensure they are included within the risk framework. Monitor these risks on a regular basis.
Fit and proper	Oversee the process to ensure that all Senior Manager Functions, Certified Functions, Key Function Holders, Persons Performing Key Functions and Non-Executive Directors are fit and proper for their roles. This includes being owner of the Fit and Proper Policy.
Anti-money laundering (AML) oversight	Ensure all AML procedures and policies are reviewed on an annual basis and a Money Laundering Reporting Officer report is presented to the board.
Compliance plan	Prepare a compliance plan and gain board approval.

Reporting

As part of delivering its obligations, the compliance function produces or contributes to the following key reports:

- **Monthly compliance report:** Covers regulatory changes, regulatory engagement, compliance monitoring and relevant financial crime and data protection updates.
- **Quarterly compliance board report:** Provides the board with a detailed compliance function update, covering regulatory changes, regulatory interaction and compliance monitoring.
- **Conduct Risk MI:** Monthly report to the Customer Committee, including OSP data metrics and a Quarterly Board pack with commentary on action taken on amber or red measures and an “In focus” report on a relevant key topic.
- **Money-Laundering Reporting Officer report:** Report on the anti-money laundering risks and controls within the business.
- **Annual assurance report:** An annual summary of the monitoring activities carried out by the outsourced service providers’ compliance functions and the compliance function.
- **Outsourced service provider report:** A summary report covering breaches, compliance service level agreements, compliance monitoring, AML and regulatory change.

B.5 Internal audit function

B.5.1 Overview

Internal auditing is an independent and objective assurance activity that sits within the company’s governance structure and is guided by a philosophy of adding value to improve the operations of the company. It assists the company’s management team in accomplishing its objectives by bringing a systematic and disciplined approach to evaluating and improving the effectiveness of the company’s risk management, control, and governance processes both internally and within its outsourcer providers. The Head of Internal Audit is appointed on recommendation by the Audit & Risk Committee, and the internal audit function derives its authority from this committee.

Independence is obtained by virtue of the fact that the function does not have any operational responsibilities, to ensure no conflicts of interests arise. In addition, there is regular direct access to the Audit & Risk Committee, including formal access to the Non-Executive Directors without the Executive Directors being present.

B.5.2 Reporting lines

The Head of Internal Audit reports functionally to the Audit & Risk Committee and administratively to the CEO.

B.5.3 Responsibilities

The table below provides a summary of the key responsibilities of the internal audit function:

Responsibility	Description
Devise audit plan	An internal audit plan is drawn up on an annual basis which includes the proposed scope, timing and resource requirements for the forthcoming year.
Carry out audits and make recommendations	This involves audit planning, an internal controls assessment and the drafting of audit recommendations where deemed appropriate.
Follow up recommendations	All agreed audit recommendations are periodically followed-up to ensure they have been implemented in an appropriate timescale.

B. SYSTEM OF GOVERNANCE (CONTINUED)

B.5 Internal audit function (continued)

B.5.4 Reporting

In delivering the responsibilities within B.5.3, the Head of Internal Audit produces a number of reports that are presented to the Audit & Risk Committee. These are:

- an annual audit plan, which includes a rationale for the selected plan, associated timings and any resource constraints; and
- a quarterly report is prepared for the Audit & Risk Committee that includes: a summary of progress against and/or changes to the aforementioned audit plan; key findings, significant issues and key themes arising from the performance of audits; and analysis of management's progress against implementing the recommendations made by internal audit.

B.6 Actuarial function

B.6.1 Overview

The actuarial function is headed up by the Chief Actuary who has day-to-day responsibility for delivering the actuarial function's responsibilities. A With-Profits Actuary (WPA) is also appointed for the with profit business within the company.

B.6.2 Reporting lines

The Chief Actuary reports to the CEO for management purposes, but to the board for a number of the regulated tasks. As such, the Chief Actuary has direct access to the board and its board committees, namely the Audit & Risk Committee. The With-Profits Actuary also has access to the board.

B.6.3 Responsibilities

The Chief Actuary has the responsibility to advise the CEO and FD of any concerns regarding the sufficiency of financial assets to meet liabilities. To aid this, the main responsibilities of the actuarial function include the following areas:

Responsibility	Description
Assumptions	The actuarial function has to "ensure the appropriateness of the assumptions made in the calculation of technical provisions" and "compare best estimates against experience". The detailed work will be undertaken by the actuarial team under the guidance of the Chief Actuary. A report will be presented by the Chief Actuary to the Audit & Risk Committee and the board, at least annually, proposing the assumptions to be used for the calculation of the technical provisions.
Data	The Chief Actuary is responsible for the data policy and adherence to it.
Technical provisions	The actuarial team of CA plc will act as the Actuarial Function to coordinate such work, including proposing the methodologies and assumptions to be used. The Chief Actuary is responsible for such work, ensuring it meets appropriate standards and regulations.
Underwriting	The Chief Actuary is responsible for the underwriting policy. The Chief Actuary provides the board annually with an opinion on the underwriting policy, as required by the guidelines.
Reinsurance	The Chief Actuary is responsible for the separate reinsurance policy for the company. The Chief Actuary provides the board annually with an opinion on the reinsurance policy, as required by the guidelines.
Risk management	The Chief Actuary and the actuarial function support the Chief Risk Officer with the risk management for the company. Specific tasks reasonably expected to be undertaken by the actuarial function, include the production of an Own Solvency Needs Assessment (OSNA) and stress testing and projections to support the delivery of Own Risk and Solvency Assessment (ORSA) and for business planning purposes.
With-Profits business	The Chief Actuary is a member of the With-Profits Committee (WPC). The With-Profits Actuary attends all meetings of the WPC in his/her capacity as a key advisor for the management of the with-profits business.
Investments	The Chief Actuary is a member of the Investment Committee and advises the committee in respect of asset-liability matching, and is responsible for (a) the investment policy; (b) the asset-liability matching policy and (c) the concentration risk policy.

B.6.4 Reporting

The Chief Actuary reports to the Audit & Risk Committee and the board on the following:

- the results of each quarterly valuation of technical provisions, covering the results of the calculations, including commentary on any material changes in data, methodologies or assumptions;
- at least annually, this includes coverage of the validation process and quality of data;
- the report also considers any deficiencies in the process or output and makes recommendations, in such cases, on how improvements can be introduced;
- separate papers on assumptions and methodologies used; and
- the results of the annual review of the underwriting and reinsurance policy.

Both the Chief Actuary and the With-Profits Actuary are also required, in certain circumstances, to report the relevant matter to the PRA.

B. SYSTEM OF GOVERNANCE (CONTINUED)

B.7 Outsourcing

B.7.1 Overview

Outsourcing is an arrangement of any form between a firm and a service provider by which that service provider performs a process, a service or an activity, which would otherwise be undertaken by the firm itself.

CA plc's operating model is to maintain a skilled and experienced corporate governance team and outsource operating activity to professional specialists, wherever feasible. The governance team will maintain oversight of the outsourced operations.

Outsourcing does not result in the delegation by CA plc executive management of their responsibility or accountability for carrying out an activity.

B.7.2 Responsibilities

CA plc recognises its accountability for services outsourced and has a defined governance model for outsourcers that provide critical services. The company defines critical services as "services that are vital for the ongoing operation of CA plc's business". These have been identified as:

- Administration of life and pensions policies, including call centre operations;
- Actuarial services, including valuations of technical provisions;
- Investment of assets or portfolio management including unit pricing;
- Claims handling;
- Compliance;
- Internal auditing;
- Financial reporting;
- Risk management;
- Actuarial support; and
- Provision of cloud services, data storage and information security.

Of the above, the company outsources part or all of the operation for each of the above activities, barring internal auditing. Overall accountability is still retained within CA plc and the oversight of the outsourced activities is a significant part of the responsibility of the corporate governance team. The maintenance of service and performance standards is governed through a strict regime of service level agreements and through continuous monitoring of performance. This includes responsibility to ensure that outsourced activities are carried out in accordance with laws, regulations and industry best practice standards and adhere to the principles and practices of treating our customers fairly by delivering fair customer outcomes. All of the outsourcers' activities are for UK jurisdiction contracts. Outsourced activity takes place in the UK and India.

To ensure effective control of outsourced activities, a documented outsourcing policy is in place. The aim of this policy is to set out rules and principles for outsourcing of activities. In particular it aims to ensure that:

- *There are processes in place for how to enter into outsourcing agreements in a way that takes into account the effects of the agreement on the company's operation; and*
- *The implementation of suitable reporting and monitoring routines, to ensure effective control of the outsourced activities and manage the associated risks.*

CA plc has mandated key controls defined across the entire outsourcing lifecycle:

- Strategy;
- Selection;
- Negotiation;
- Migrate and integrate services;
- Performance and quality management; and
- Completion renegotiation and exit.

B.8 Any other information

There is no other material information regarding the system of governance of CA plc that is deemed necessary to include.

C. RISK PROFILE

Introduction

The sections below provide a qualitative and quantitative summary of the risk profile for each category of risk. Where information is specific to each risk category, it has been set out under the relevant heading. Where the information is common across all risk categories it has been included in Section C.7.

CA plc is substantially closed to new business and in run-off and so the risk profile is relatively stable. The risk profile is considered to be fairly standard for a UK life insurer and there are not considered to be any particularly unusual risks or features in CA plc.

Section C.7.1 shows the risk profile of CA plc using the risk capital requirements calculated by the Standard Formula as at 31 December 2018, together with the equivalent results from 31 December 2017. This shows how the risk profile, and any concentrations of risk, have changed over the year.

C.1 Underwriting risk

C.1.1 Qualitative review of risk profile

Underwriting risk

As a life insurer, CA plc carries mortality and morbidity risk although much of this is mitigated through the use of reinsurance. This risk can arise due to mortality experience being higher than expected, resulting in higher than expected claims pay-outs. This can be due to trend risk (e.g. worsening experience over time) or catastrophe risk (e.g. one off events or pandemics). CA plc is less exposed to anti-selection risk arising from writing new policies, given that CA is closed to new business and existing business has been in-force for a significant period. Mortality risk can be further mitigated to some extent as CA plc is able to increase mortality charges on some in-force contracts.

CA plc is subject to longevity risk through deferred annuities and annuities in payment. Given that the size of the book is relatively small (in industry terms), CA plc uses industry models to estimate future mortality improvements.

Underwriting risk - expense

CA plc is exposed to expense risk if future expenses turn out to be higher than expected. This may arise if expenses exceed budgeted levels, or if there are one off unexpected costs e.g. regulatory change costs, or if future expense inflation is higher than expected. This risk can be mitigated to a certain extent as CA plc is able to increase expense charges on some in-force contracts.

As CA plc is in run off, it is also exposed to the expense risks associated with a reducing book, where fixed costs need to be spread over a lower in-force policy base. The CA plc operating model is to outsource all support activities to professional specialists where appropriate and aims to reduce the impact of fixed and semi-fixed costs, which may otherwise occur as the in-force business runs off. By securing long-term contracts to support these activities, CA plc aims to better align the variability of the expense base with the size of the in-force policy portfolio.

Underwriting risk - lapse

Lapse risk arises mainly on unit-linked business due to the loss of future charge income if lapses are higher than expected. In capital terms, lapse risk is a material risk for CA plc and can be driven by external events such as economic recession or reputational damage, or by internal factors such as poor fund performance or customer service delivery. However, given that business has been in-force for a significant period, lapse experience tends to be relatively stable over time. In addition, as the CA plc book has a large proportion of pensions business, where policies under the age of 55 can only be transferred and not surrendered, it is less likely to be exposed to mass lapse type events.

C.1.2 Risk mitigation techniques and monitoring

Section C.7.2 sets out the techniques used for mitigating risks and the processes used for monitoring their continued effectiveness.

C.1.3 Stress and scenario testing

Section C.7.3 provides a description of the methods used, the assumptions made and the outcome of the stress and scenario testing carried out for the material risks.

C. RISK PROFILE (CONTINUED)

C.2 Market risk

C.2.1 Qualitative review of risk profile

Market risk emerges in different ways through each of the different funds. For the two with-profits funds, it arises from a combination of the mismatch between assets and liabilities caused by the guaranteed benefits provided and the way in which funds are invested. For the main fund, the principal cause of market risk results from the indirect impact on unit linked funds where future charge income is dependent on the investment performance of the underlying assets. Other minor causes of market risk in the main fund result from small asset/liability mismatches on the non-linked business and the investment policy adopted for surplus assets.

There is currently no material direct exposure to foreign currencies, although it does arise indirectly due to the linked funds being invested in overseas assets, and to a lesser degree in the with-profits funds where most of the currency exposure is hedged. Derivatives are held within the linked and with-profit funds only for the purpose of efficient portfolio management and as a risk reduction tool.

C.2.2 Risk mitigation techniques and monitoring

Section C.7.2 sets out the techniques used for mitigating risks and the processes used for monitoring their continued effectiveness.

C.2.3 Stress and scenario testing

Section C.7.3 provides a description of the methods used, the assumptions made and the outcome of the stress and scenario testing carried out for the material risks.

C.2.4 Assets invested in accordance with the prudent person principle

The company holds assets to back its various liabilities and its surplus funds and through appropriate investment management, CA plc can achieve an appropriate level of investment return as well as maintaining and potentially improving the immediate / longer term solvency position of its with-profits and non-profit funds. In turn, achieving an appropriate level of investment return is not the sole aim, as the company needs to manage the related risks within the tolerances set by the Risk Appetite with the aim to achieve pay outs in line with policyholders' reasonable expectations.

CA plc has a limited risk appetite for excess exposure to equities, property and foreign currency exposure, except in funds where the policyholder bears the risk or where it aids the operation of such funds, e.g. the use of a manager's box.

CA plc also has a limited risk appetite for excess interest rate exposure, which is maintained by holding assets which match the features of the liabilities. However, there is a positive risk appetite towards credit to the extent that the corporate bonds and deposits the company invests in are of a sufficiently high credit rating and offer an acceptable risk-adjusted return.

Finally, CA plc has a limited risk appetite for liquidity risk and concentration risk. Subsequently, when setting the asset mix and determining suitable investments it is important to maintain a minimum level of deposit holdings and also to ensure that it does not invest too much with a single counterparty, for which limits exist.

Investment management

The board is responsible for ensuring that the controls for investment management are appropriate and effective. As such the board is responsible for the approval of the investment policy and oversight of its operation. This includes signing off major changes in the approach used for investment management.

C.3 Credit risk

C.3.1 Qualitative review of risk profile

Credit risk arises principally within non-linked policyholder funds and from the investment of surplus assets. Within the with-profits policyholder funds credit risk is generally borne by the policyholders; however any defaults, or significant downgrades, could increase the cost of the guarantees in the funds. The portion of the with-profits funds which is attributable to shareholders is also exposed to credit risk.

C.3.2 Risk mitigation techniques and monitoring

Section C.7.2 sets out the techniques used for mitigating risks and the processes used for monitoring their continued effectiveness.

C.3.3 Stress and scenario testing

Section C.7.3 provides a description of the methods used, the assumptions made and the outcome of the stress and scenario testing carried out for the material risks.

C.3.4 Assets invested in accordance with the prudent person principle

This is covered in Section C.2.5 above.

C. RISK PROFILE (CONTINUED)

C.4 Liquidity risk

C.4.1 Qualitative review of risk profile

In terms of investment funds, the main area where liquidity risk could arise is property investments for linked policyholders. With the exception of a small number of personal funds, property exposure is mainly carried out through investment in authorised unit trusts.

Other liquidity issues could arise from counterparty failures, a large spike in the level of claims or other unexpected expense outflow. However, given that CA plc holds a substantial portion of liquid assets, liquidity risk is not considered to be a major risk for CA plc.

C.4.2 Risk mitigation techniques and monitoring

Section C.7.2 sets out the techniques used for mitigating risks and the processes used for monitoring their continued effectiveness.

C.4.3 Stress and scenario testing

Section C.7.3 provides a description of the methods used, the assumptions made and the outcome of the stress and scenario testing carried out for the material risks.

C.4.4 Expected profit included in future premiums

The expected profit in future premiums as at 31 December 2018, was £153.9m (31 December 2017: £173.9m).

The expected profits included in future premiums (EPIFP) result from the inclusion in technical provisions of premiums on existing (in-force) business that will be received in the future, but that have not yet been received. Any premiums already received by the undertaking are not included within the scope of EPIFP. Single premium contracts where the premium has already been received are also excluded.

C.5 Operational risk

C.5.1 Qualitative review of risk profile

Operational risk is the risk of losses resulting from inadequate, unfair or failed internal processes, people or systems, information security and/or data breaches or from external events. CA plc typically carries the same operational risks as most insurers. However, the CA plc operating model is to outsource support activities to specialist service providers typically covering IT, legal and compliance, policy administration, claims management, complaints management, finance and accounting, actuarial, investment operations and fund management. Consequently, much of the operational risk within CA plc arises within its outsourced providers, and therefore operational risk management is heavily focused on the review, oversight and monitoring performed by the corporate governance team within CA plc. Operational and expense risks may also arise if the outsource service providers do not have adequate business continuity plans, information security controls or if the outsource provider defaults on the contract (e.g. due to financial difficulties) requiring the service to be transferred to another provider. The liability for the cost of operational errors for many operational risks resides with the outsource service provider according to the terms of the contract.

C.5.2 Risk mitigation techniques and monitoring

Section C.7.2 sets out the techniques used for mitigating risks and the processes used for monitoring their continued effectiveness.

C.5.3 Stress and scenario testing

Section C.7.3 provides a description of the methods used, the assumptions made and the outcome of the stress and scenario testing carried out for the material risks.

C.6 Other material risks

C.6.1 Qualitative review of risk profile

Counterparty default risk

The reinsurance arrangements in place create some counterparty default exposure. This primarily relates to CA plc having significant liabilities reassured with ReAssure, although this risk is mitigated to a large extent by the legal charge between CA plc and ReAssure which, in the event of ReAssure becoming insolvent, enables CA plc's reassured liabilities to rank equally with ReAssure's other direct liabilities.

Conduct risk

As CA plc is closed to new business, it is generally not exposed to the conduct risks associated with the design, sales and marketing of new products. Conduct risk, however, arises in respect of in-force business if CA plc fails to follow regulatory standards and guidance, breaches internal standards of achieving good customer outcomes, or does not treat customers fairly. Conduct risk may also arise due a change in regulatory standards, particularly if this is applied retrospectively to policies that were set up a number of years ago. Risk capital is not explicitly held to cover conduct risk but is included as part of the capital for operational risk.

C.6.2 Risk mitigation techniques and monitoring

Section C.7.2 sets out the techniques used for mitigating risks and the processes used for monitoring their continued effectiveness.

C.6.3 Stress and scenario testing

Section C.7.3 provides a description of the methods used, the assumptions made and the outcome of the stress and scenario testing carried out for the material risks.

C. RISK PROFILE (CONTINUED)

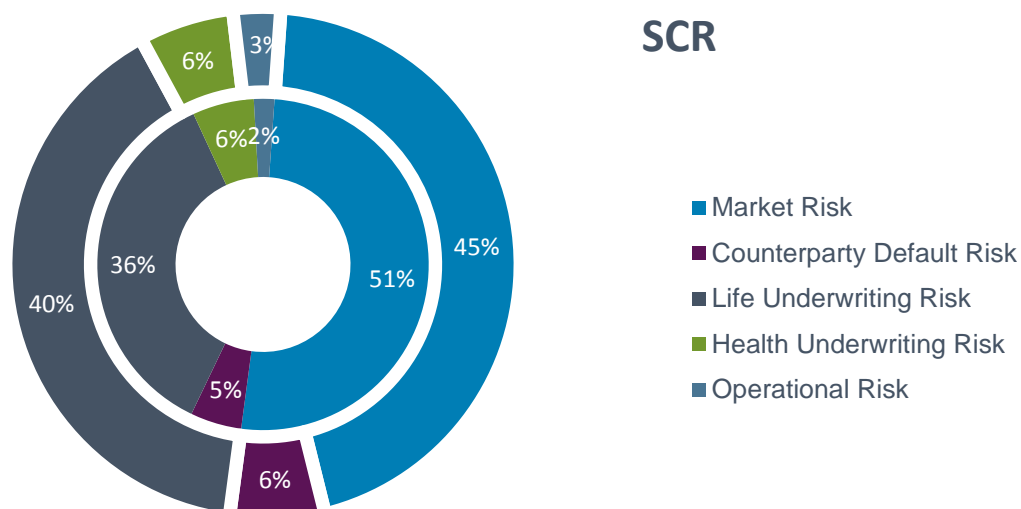

C.7 Any other information

C.7.1 Risk profile (quantitative)

This section considers the risk profile of CA plc using the risk capital requirements calculated using the Standard Formula under Pillar 1 regulatory requirement as at 31 December 2018, together with the equivalent results from 31 December 2017. This therefore shows how the risk profile, and any concentrations of risk, have changed over the year.

Risk profile by risk category

The following chart shows a breakdown of the overall Solvency Capital Requirement (SCR) into the major risk categories. The outer circle shows the position at 31 December 2018 and the inner circle shows the position at 31 December 2017. The results are shown after allowing for diversification between the sub-risks within each risk category, but do not allow the diversification between each risk category. The results do not allow for any benefits arising from the Loss Absorbing Capacity of Deferred Tax.

The risk profile, at a high level, is dominated by Market and Life underwriting risk, as would be expected for an insurance business. The risk profile is well diversified and has remained relatively stable during the reporting period. The proportional increase in life underwriting risk and reduction in market risk are mainly caused by the run off of the inforce book and market movements over 2018. A further breakdown of market, counterparty default and non-market risk capital is shown in the two following charts. These results are before allowing for diversification between individual risks.

Market and counterparty default risk breakdown

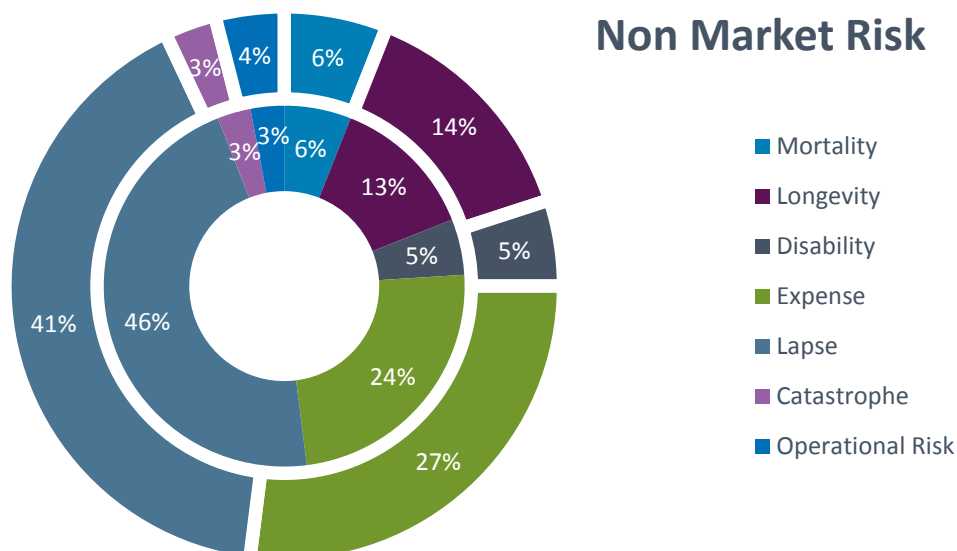

The chart illustrates a diversified portfolio of market risks, with the changes over the year mainly driven by market movements. The proportion of equity risk has fallen during 2018, which was mainly due to a fall in equity markets. The proportion of spread risk has reduced during 2018, mainly due to a reduction in corporate bond holdings in the SPP with profits funds.

C. RISK PROFILE (CONTINUED)

C.7 Any other information (continued)

C.7.1 Risk profile (quantitative) (continued)

Non-market risk

The chart shows that the risk profile of non-market risks has remained relatively stable over the year, with expense and lapse risk continuing to make up the majority of the risk profile. Mortality risk is well mitigated through the use of reinsurance, and also through potential management actions to increase mortality charges in the event of sustained adverse experience.

C.7.2 Risk mitigation techniques and monitoring

Risk assessment

Section B.3.1 sets out the risk management system for CA plc and section B.3.2 explains how CA plc carries out its ORSA. This provides the framework by which individual risks are identified, assessed, monitored and managed. As part of this framework, CA plc quantifies the capital impact of different risks by:

- Determining the risk capital requirements using the Standard Formula as part of the quarterly financial reporting cycle; and
- Performing additional stress and scenario testing to support the ORSA.

An assessment is carried out on an annual basis to confirm that the Standard Formula remains appropriate for establishing the regulatory capital requirements for CA plc. This assessment is approved by the board, with the most recent assessment concluding that the standard formula remains appropriate.

Risk mitigation

CA plc has an established risk management system which incorporates risk strategies, policies, control processes and reporting. The risk management system provides the framework to monitor and manage risks, and to assess the effectiveness of controls and risk mitigation techniques.

Within the risk management system, there are a number of specific risk policies covering all the main categories of risk. The risk policies set out the reporting procedures, roles and responsibilities, and the processes and controls to manage risk. A summary of the key controls and risk mitigation techniques for each of the main risk areas is shown in the table below. Given that CA plc is closed to new business, these are not anticipated to change materially over future periods.

C. RISK PROFILE (CONTINUED)

C.7 Any other information (continued)

C.7.2 Risk mitigation techniques and monitoring (continued)

Risk category	Key Controls and Risk Mitigation Techniques
Underwriting	
– Mortality/Morbidity	<ul style="list-style-type: none"> – Reinsurance programmes to manage mortality and morbidity risk. – Regular experience investigations, and industry analysis, to support best estimate assumptions and identify trends. – Options on certain contracts to vary premiums and/or charges in the light of adverse experience.
– Expense	<ul style="list-style-type: none"> – Stringent regime of budgetary control, monitored as part of the annual planning and quarterly reporting cycles. – Outsourcing strategy to help reduce the impact of semi and fixed costs as the existing book runs off. – Options on certain contracts to increase policy charges.
– Lapse	<ul style="list-style-type: none"> – Regular experience investigations to support best estimate assumptions and identify trends. – Active investment management to support competitive policyholder returns. – Stringent management of customer service delivery and adherence to treating customers fairly (TCF) principles.
Market	<ul style="list-style-type: none"> – Wide range of investment funds and managers to avoid significant concentrations of risk. – Individual fund mandates to diversify risks and produce competitive returns. – Matching of assets and liabilities to reduce the impact of adverse interest rate movements. – Established investment governance framework to provide review and oversight of external fund managers, and monitor adherence to investment policy.
Credit and counterparty default	<ul style="list-style-type: none"> – Operation of controls which limit the level of exposure to any single counterparty and impose limits on exposure by credit rating. – For the most significant reinsurance exposure, there is a charge over the reinsurer's assets, which ranks CA plc equally with other policyholders.
Liquidity	<ul style="list-style-type: none"> – Cash flow forecasts to anticipate funding requirements over the following 12 months and taking into account wider funding requirements from the business planning and/or group dividend payments. – Monthly treasury reporting showing the liquid assets held and how this compares to the minimum threshold set by the Board Investment Committee.
Operational risk	<ul style="list-style-type: none"> – Close oversight of the performance and risk management of all outsourced service providers. – Rigorous service level measures for outsourced service providers and management information flows under its contractual arrangements. – Ongoing monitoring and testing of business continuity plans and financial assessments of outsource service providers. – Regular information security audits and reviews of outsourced service providers.
Conduct risk	<ul style="list-style-type: none"> – Close oversight of the performance and risk management of all outsourced service providers. – Implementation of a comprehensive Customer Strategy programme to address the regulatory standards set out in FG16/8 regarding the fair treatment of long-standing customers in the life insurance sector. – Regular review of conduct risk management information. – Regular product reviews to ensure products continue to deliver fair outcomes for customers. – The Compliance Function maintains a Compliance Plan which includes a comprehensive compliance monitoring programme. The activities of the Compliance Function are summarised in Section B.4.2.

C. RISK PROFILE (CONTINUED)

C.7 Any other information (continued)

C.7.3 Stress and scenario testing

Overview

CA plc uses the Standard Formula to determine its regulatory capital requirements and these are calculated and reported on a quarterly basis. As part of the ORSA CA plc performs a forward looking assessment of its ability to meet the regulatory capital requirements under a range of stresses and scenarios.

Full details of the stresses and scenarios, the methodologies used and the results are included in the ORSA report which is approved by the board and submitted to the Prudential Regulation Authority. The stresses and scenarios selected for the 2018 ORSA were based on the outcomes of an executive team workshop, and follow the principles set out in the Chesnara group stress and scenario testing framework. As well as current known risks, the stresses and scenarios take account of forward looking and emerging risks. The stress and scenario tests approved by the board and included in the ORSA are summarised below.

- Stresses to market events including:
 - A fall in the value of equities;
 - A rise in the value of sterling against other currencies;
 - A fall in interest rates;
 - The impact of widening credit spreads;
 - A change in swap rates relative to gilt yields; and
 - Combined scenarios where different events occur in combination.
- Stresses to insurance risks including:
 - A one off sudden increase in lapse rates;
 - An increase in mortality rates; and
 - An increase in expenses and in particular the impact of fixed expenses as the in-force book runs off.
- Events which may cause a significant strain on liquidity
- Default of CA plc's largest counterparties
- Operational risks including:
 - Material events affecting the performance of an outsource service provider; and
 - Cyber risk and/or a breach of data security.

Methodology

The ORSA has a base date of 30 June 2018. The base capital position uses the same methodology and assumptions as the 30 June 2018 Solvency II financial reporting, but updated to take account of the updated expenses projections, as included in the 2019 to 2021 Business Plan.

Assets are recorded at market value, liabilities are calculated based on best estimate assumptions, with risk capital (SCR) determined in accordance with the standard formula. A Risk Margin is also held on the balance sheet to reflect the cost of holding capital to support the SCR.

In quantifying the financial impact of each stress, the balance sheet is projected forward and it is assumed that each stress will occur immediately after 31 December 2018 with no subsequent recovery during the projection period.

After applying the stress, risk capital is recalculated in accordance with the standard formula in order to re-establish the regulatory capital requirements.

C. RISK PROFILE (CONTINUED)

C.7 Any other information (continued)

C.7.3 Stress and scenario testing (continued)

Outcomes from the stress and scenario testing

The detailed results from the stresses and scenarios outlined above are included in the ORSA report, which is subsequently approved by the board and privately submitted to the Prudential Regulation Authority.

As part of the financial year end process undertaken at 31 December 2018, a range of sensitivities are also performed to show the impact on CA's key financial metrics, with summary results disclosed in the Chesnara group Annual Report & Accounts. The table below summaries the main results from this exercise and shows the impact from a range of stresses and scenarios on the solvency position

Impacts		Key	
•	£0m to £5m	■	Positive impact
●	£5m to £10m	■	Negative impact
●	£10m+		

£m	Capital impact of stress
20% sterling appreciation	•
25% equity fall	●
25% equity rise	•
10% equity fall	•
10% equity rise	•
1% interest rate rise	●
50bps credit spread rise	•
25bps swap rate fall	●
10% mass lapse	•
10% expense rise + 1% inflation rise	●

Whilst the sensitivities above provide a useful guide, in practice, how the position reacts to changing conditions is complex and the exact level of impact can vary due to the interactions of events and the starting position.

D. VALUATION FOR SOLVENCY PURPOSES

D.1 Assets

Introduction

This section of the report shows how the assets and liabilities of the company have been valued, both for Solvency and IFRS reporting purposes. The below table summarises the assets less liabilities, as measured on both a solvency and IFRS basis, and provides a reference where further information has been provided:

	Section reference	31 December 2018		31 December 2017	
		Solvency II value	Statutory accounts value	Solvency II value	Statutory accounts value
		£'000	£'000	£'000	£'000
Assets	Section D1	2,437,015	2,439,068	2,882,238	2,884,693
Net technical provisions	Section D2	(2,157,985)	(2,203,868)	(2,478,738)	(2,556,763)
Other liabilities	Section D3	(88,623)	(84,526)	(178,271)	(169,530)
Assets less liabilities		190,407	150,674	225,229	158,400

The table below shows separately the value of each class of asset under Solvency II values and the IFRS values:

	Note	31 December 2018		31 December 2017	
		Solvency II value	Statutory accounts value	Solvency II value	Statutory accounts value
		£'000	£'000	£'000	£'000
Assets					
Deferred acquisition costs	1.01	–	2,053	–	2,455
Investments (other than assets held for index-linked and unit-linked contracts)		636,643	636,643	778,072	778,072
<i>Bonds</i>		315,129	315,129	330,158	330,158

Insurance and intermediaries receivables	1.06	1,871	1,871	2,128	2,128
Reinsurance receivables	1.07	20,841	20,841	24,433	24,433
Receivables (trade, not insurance)	1.08	11,052	11,052	10,510	10,510
Cash and cash equivalents	1.09	24,756	24,756	17,717	17,717
Any other assets, not elsewhere shown	1.10	1,105	1,105	1,119	1,119
Total assets		2,437,015	2,439,068	2,882,238	2,884,693

¹There was a change in presentation during 2018. Derivatives are now netted off against each contract, and therefore the asset and liability values have dropped in comparison to the prior year. There has been no change to the valuation methodology.

Bases, methods, assumptions and inputs used in asset valuation for Solvency purposes, and difference between the amounts recorded in the financial statements

In general assets are recognised and valued in line with IFRS accounting principles and consequently valued at fair value. For assets valued using market value, CA plc relies on quoted prices in active markets to value its investments. Quoted market prices in an active market provide the most reliable evidence of fair value and are used without adjustment to measure fair value whenever available. The company assesses whether markets are active by considering both the frequency and volume of trades and whether these are sufficient to provide appropriate pricing information.

Further detail by material asset class has been provided below.

D. VALUATION FOR SOLVENCY PURPOSES (CONTINUED)

D.1 Assets (continued)

D.1.01 Deferred acquisition costs (DAC)

Basis and methods for IFRS valuation

Deferred acquisition costs are stated at amortised cost, less impairment. On initial recognition, the carrying value is based on cost. These costs are subsequently amortised over the expected life of the underlying policyholder contract to which they relate. Impairment losses are booked at the point of identification.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation

Judgment is applied in deciding the amount of direct costs that are incurred in acquiring the rights to the policyholder contract. Judgment is also applied in establishing the amortisation of the assets representing these contractual rights. Estimates are applied in determining the lifetime of the policyholder contracts and in determining the recoverability of the contractual rights assets by reference to expected future income and expense levels.

Inputs for IFRS valuation

- Direct costs that are incurred in acquiring the rights to a policyholder contract; and
- Estimated life of policyholder contracts to which the acquisition costs relate.

Solvency II valuation

The general rule is that intangible assets, other than goodwill, are recognised in the Solvency II balance sheet at a value other than zero only if they can be sold separately and the insurance undertaking can demonstrate that there is a value for the same or similar assets that has been derived from quoted market prices in active markets. As deferred acquisition costs fail to meet these criteria, these are valued at zero in line with Solvency II rules.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D.1.02 Non-linked investment assets

Basis and methods for IFRS valuation:

Non-linked assets are measured at fair value. Fair values are determined by reference to observable market prices where available and reliable. The fair value of financial assets quoted in an active market, is their bid prices as at the balance sheet date.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation

No significant assumptions or judgements are made in the valuation of these assets, as they are based upon market observable inputs.

Inputs for IFRS valuation

Observable market prices.

Solvency II valuation

There are no differences between IFRS and SII for valuation purposes.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D.1.03 Assets held for index-linked & unit-linked funds

Basis and methods for IFRS valuation

Assets held for index-linked & unit-linked funds are measured at fair value. Fair values are determined by reference to observable market prices where available and reliable. The fair value of financial assets (other than those held in collective investment schemes) quoted in an active market, are their bid prices as at the balance sheet date. For collectives, fair value is taken to be the published bid price.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation

No significant assumptions or judgements are made in the valuation of these assets, as they are based upon market observable inputs.

Inputs for IFRS valuation

Observable market prices.

Solvency II valuation

There are no differences between IFRS and SII for valuation purposes.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D. VALUATION FOR SOLVENCY PURPOSES (CONTINUED)

D.1 Assets (continued)

D.1.04 Derivatives

Basis and methods

Derivative financial instruments are measured at fair value and comprise forward exchange contracts. The fair value of forward exchange contracts is their quoted market price at the balance sheet date, being the present value of the quoted forward price.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty)

No significant assumptions or judgements are made in the valuation of these assets, as they are based upon market observable inputs.

Inputs

Observable market prices.

Solvency II valuation

There are no differences between IFRS and SII for valuation purposes.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis of derivatives. However, for SII purposes, derivatives are now being disclosed in the balance sheet on a net basis (net of both legs of the derivative) whereas in 2017 the asset and liability legs were shown separately. The 2018 balance sheet presentation is now in line with IFRS.

D.1.05 Loans on policies

Basis and methods for IFRS valuation

Loans on policies are measured at fair value.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation

No significant assumptions or judgements are made in the valuation of these assets, as they are based upon market observable inputs.

Inputs for IFRS valuation

Observable market prices.

Solvency II valuation

There are no differences between the IFRS and SII valuation methods.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D.1.06 Insurance & intermediaries receivables

Basis and methods for IFRS valuation

Insurance and intermediaries receivables are measured at amortised cost, as a reasonable approximation of fair value. This fair value is taken to be the value of the receivable on initial recognition. Should a subsequent indication of impairment be identified, then the carrying value is adjusted to reflect the reduced value of the receivable.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation

Insurance and intermediaries receivables are reviewed annually for impairment.

Inputs for IFRS valuation

Period end statements and calculations that reflect amounts outstanding as at the balance sheet date from policyholders, reinsurers, financial institutions and other sundry debtors.

Solvency II valuation

There are no differences between the IFRS and SII valuation methods.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D. VALUATION FOR SOLVENCY PURPOSES (CONTINUED)

D.1 Assets (continued)

D.1.07 Reinsurance receivables

These comprise of:

- a) Reinsurers' share of insurance contract provisions;
- b) Amounts deposited with reinsurers; and
- c) Reinsurers' share of accrued policyholder claims.

Basis and methods for IFRS valuation

Reinsurance receivables, representing amounts due from reinsurers, are measured at fair value, taken as being the amount of reinsurance that is expected to be recoverable on initial recognition of the reinsurance asset.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation

Assumptions are made regarding the extent to which a reinsurance receivable has a risk of not being fully recoverable. At each balance sheet date an assessment is performed regarding whether there should be any provisions raised against reinsurance receivables.

Inputs for IFRS valuation

Reinsurance accounts prepared in accordance with the provisions contained within the underlying reinsurance treaties.

Solvency II valuation

Reinsurance receivables are valued in SII on the same basis as for IFRS.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D.1.08 Receivables (trade, not insurance)

Basis and methods for IFRS valuation

Receivables are measured at amortised cost, as a reasonable approximation of fair value. This fair value is taken to be the value of the receivable on initial recognition. Should a subsequent indication of impairment be identified then the carrying value is adjusted to reflect the reduced value of the receivable.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation

Receivables are assessed annually for impairment.

Inputs for IFRS valuation

Invoices that reflect the initial recognition value.

Solvency II valuation

There are no differences between the IFRS and SII valuation methods.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D.1.09 Cash and cash equivalents

Basis and methods for IFRS valuation

Cash and cash equivalents include cash-in-hand, deposits held at call with banks and other short-term highly liquid investments and are measured at fair value. Highly liquid is defined as having a short maturity of three months or less at their acquisition.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation:

None.

Inputs for IFRS valuation

- Bank and term deposit statements.
- Bank reconciliation timing differences.

Solvency II valuation

There are no differences between the IFRS and SII valuation methods.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D. VALUATION FOR SOLVENCY PURPOSES (CONTINUED)

D.1 Assets (continued)

D.1.10 Any other assets, not elsewhere shown

Basis and methods for IFRS valuation

This category of assets only includes prepayments. Prepayments are valued by spreading the up-front cost of an asset or service over the time period over which the service is received / time period over which the asset is consumed.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation

Judgement is applied in estimating the benefit arising from the prepayment and the duration over which the asset is recognised.

Inputs for IFRS valuation

The initial prepaid cost and spreading profile.

Solvency II valuation

There are no differences between the IFRS and SII valuation methods as the carrying value in the IFRS balance sheet is deemed to represent the fair value of the asset.

Changes made to the recognition and valuation bases used or on estimations made during the period

During the year, there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D. VALUATION FOR SOLVENCY PURPOSES (CONTINUED)

D.2 Technical provisions

D.2.1 Value of technical provisions

The following table analyses the net technical provisions / insurance liabilities under Solvency II and IFRS values:

	31 December 2018		31 December 2017	
	Solvency II value	IFRS value	Solvency II value	IFRS value
	£'000	£'000	£'000	£'000
Net technical provisions:				
Health (similar to life):				
<i>Technical provisions calculated as a whole</i>	212,061	–	–	–
<i>Best estimate / statutory accounts value</i>	(7,328)	220,071	233,467	251,802
<i>Risk margin</i>	3,853		4,986	
<i>Reinsurance recoverables</i>	2,405	1,738	3,280	2,096
Total	210,991	221,809	241,733	253,898
Life (ex-health and index-linked and unit-linked):				
<i>Technical provisions calculated as a whole</i>	–	–	–	–
<i>Best estimate / statutory accounts value</i>	512,265	604,387	541,054	656,833
<i>Risk margin</i>	12,411		12,432	
<i>Reinsurance recoverables</i>	(98,989)	(122,045)	(100,067)	(118,358)
Total	426,737	482,342	453,419	538,475
Index-linked and unit-linked:				
<i>Technical provisions calculated as a whole</i>	1,569,826	–	–	–
<i>Best estimate / statutory accounts value</i>	(15,304)	1,570,070	1,838,160	1,860,622
<i>Risk margin</i>	12,784		16,540	
<i>Reinsurance recoverables</i>	(47,049)	(70,353)	(71,114)	(96,232)
Total	1,520,257	1,499,717	1,783,586	1,764,390
Total net technical provision	2,157,985	2,203,868	2,478,738	2,556,763

The technical provisions for CA plc consist of technical provisions (TP) calculated as a whole, best estimate liabilities ('BEL') and the risk margin. This section considers the TP calculated as a whole, BEL and risk margin separately, describing the basis, methods and main assumptions. Where relevant, this section highlights differences in basis, methods and main assumptions between the lines of business.

TP calculated as a whole

The technical provisions calculated as a whole are used to represent the policyholder value of unit-linked contracts and are set with reference to the unit fund as at the valuation date.

BEL basis and methodology

The BEL corresponds to the probability-weighted average of future policyholder cash-flows in excess of any TP calculated as a whole, allowing for items such as premiums, claims, expenses and lapses. The calculation takes account of the time value of money (expected present value of future cash-flows), using the relevant risk-free interest rate term structure supplied by EIOPA. The calculation is conducted at a per-policy level for all business with negative BELs being permitted. Similarly, no implicit or explicit surrender value floor is assumed.

Policyholder cash flows

The cash flow projections include all the cash in-flows and out-flows required to settle the insurance and reinsurance obligations over the lifetime of the policy. Specifically:

- claim payments including both guaranteed and discretionary;
- expenses;
- premiums;
- renewal and initial commission;
- payments between CA plc and investment firms; and
- taxation payments.

D. VALUATION FOR SOLVENCY PURPOSES (CONTINUED)

D.2 Technical provisions (continued)

D.2.1 Value of technical provisions (continued)

Future developments that will have a material impact on the cash-flows within the BEL calculation are allowed for appropriately and include items such as demographic, legal, medical, technological, social, environmental and economic developments. Cash flows included in the BEL are gross of any amounts recoverable from reinsurance. Reinsurance recoverables are calculated separately, by a similar cash flow approach as per the BEL taking into account the key features of relevant treaties, and sit within the assets on the SII balance sheet.

Through the cash flow approach, CA plc does not use any significant simplified methodology in calculating technical provisions.

Probability weighting

The probability weighting applied to each cash flow explicitly takes account of the probability that the cash-flow will occur for the policyholder at each future time.

BEL description of main assumptions

Discount rates

The time-value of money is taken into account via discounting the cash flow at a future time with reference to risk-free interest rates prescribed by EIOPA. The risk-free rates varying by time, for each currency and are derived with reference to interest rate swaps, with an adjustment to remove the credit risk. For CA plc no matching adjustment or volatility adjustment has been adopted.

Demographic assumptions

The calculation of the probability weighting for each future cash flow requires information on the likelihood of the policy still being in-force at the time that the cash flow would materialise. This requires assumptions on the mortality, lapse and morbidity of the policy, as well as the point at which the policy matures. The approach to deriving appropriate assumptions for these demographics involves:

- Analyses of actual experience;
- Assessment on both amounts and policy bases;
- Comparison to standard tables (not for lapses);
- Ensuring appropriate time periods are used to minimise volatility in own-experience results; and
- Expert judgement.

CA plc's mortality experience for annuity business is expressed as a proportion of an appropriate industry-standard table of mortality rates.

Assumptions are derived using analysis of actual experience and set separately for each class of business covering for example:

- Assurance products
- Term products
- Annuity products
- Critical illness products

Where applicable, assumptions are also required for future mortality improvement. The Continuous Mortality Investigation provides mortality projection models for modelling improvements that are utilised in the BEL calculation.

Expense assumptions

CA plc outsources certain services as identified in section B.7.2. The full expected cost associated with these arrangements is included in the BEL. CA plc also outsources the investment management, for which agreements fix the charges for the term of the agreement, as a percentage of funds under management. This covers investment management expenses. Direct expenses are also incurred by CA plc, or recharged from CA plc's parent, Chesnara plc. Allowance is made within the BEL for these costs, based on the latest expense budget. The evaluation of future outsourcing and direct expenses also allows for a best estimate of future inflation.

Policyholder behaviour - lapse and surrender assumptions

It is necessary to make assumptions regarding the number of policies that are terminated early by policyholders as these can have a variety of effects on the value of future liabilities. These policyholder discontinuances include:

- Lapsing a policy such that no future premiums or benefits are payable;
- Making the policy paid-up by ceasing the payment of premiums but with the policy continuing for the remainder of the term with a reduced level of benefits; and
- Early retirement or transfer under a pension policy.

Risk margin

The risk margin is calculated in accordance with the Solvency II specifications with no significant simplified methodology approaches utilised. It represents the cost of capital which would be added to the BEL to arrive at a fair value of the liabilities. The risk margin is calculated by projecting certain aspects of the Solvency Capital Requirement (SCR) using a risk driver approach, applying the stipulated 6% cost of capital rate and then discounting the cost of capital using the stipulated base risk-free rate term structure without any matching adjustment or volatility adjustment.

D. VALUATION FOR SOLVENCY PURPOSES (CONTINUED)

D.2 Technical provisions (continued)

D.2.1 Value of technical provisions (continued)

Reference undertaking SCR

The SCR used in the calculation of the risk margin is not the same as that produced for CA plc. Instead, it represents the subsequent SCR of the 'reference undertaking'. The following covers the way in which the reference undertaking's SCR is calculated compared to that of CA plc.

Market risk SCR

The reference undertaking is assumed to have invested in such a way as to minimise its market risk SCR, hence it is assumed to be invested entirely in UK government securities. Where this is not possible, e.g. where investment in equities is expected by policyholders, it is assumed that futures can be obtained to mitigate the market risk. As a result there is no residual market risk other than interest rate risk. Residual interest rate risk is required to be excluded from the reference undertaking SCR, hence the market risk SCR of the reference undertaking is zero.

Life and health underwriting risk SCR

The life underwriting risk SCR and health underwriting risk SCR are unchanged from those in the CA plc SCR.

Counterparty default risk SCR

The counterparty default risk SCR of the reference undertaking will follow the same calculation approach as for CA plc.

Operational risk SCR

The operational risk SCR of the reference undertaking follows the same calculation approach as for CA plc but excludes market risks.

Loss absorbing capacity of technical provisions and deferred tax asset (DTA)

CA has no loss absorbing capacity of Technical Provisions.

There will be no loss absorbing capacity of DTA for the reference undertaking.

Projection of SCR

The methodology requires the calculation of the reference undertaking's SCR at all future time periods. The following subsections cover the approach to projection of SCR for each of the risk modules.

Market risk

Not applicable, as there is no market risk SCR for the reference undertaking.

Life and health underwriting risk

The underwriting risk modules will be projected in full at the sub-module level (lapse risk, mortality risk, etc.), with the profile of each sub-module being run-off using a suitable risk driver.

Counterparty default risk

It is assumed that the most material driver of the counterparty default risk SCR is reinsurance recoverables, and the projection of these is used as the risk driver for this SCR.

Operational risk

All aspects of the operational risk SCR (i.e. premiums, provisions, BSCR and unit-linked expenses) are projected forward and an SCR at each future date is calculated based on the drivers.

Aggregation

The aggregation of the projected risk modules and sub-module SCR's into an overall reference undertaking SCR at each future time period, is carried out in the same manner, using the same correlation matrices, as in the base CA plc SCR.

Aggregate risk margin

The risk margin is calculated separately for each ring-fenced fund with the total being the sum of the individual calculations.

Allocation by line of business ('LoB')

The allocation of the total risk margin to the LoBs reflects each LoB's contribution to the overall reference undertaking SCR. A LoB's contribution to the reference undertaking SCR will be derived by reference to the sum of its underwriting risk sub-modules, as a proportion of the sum of the underwriting risk sub-modules across all LoBs. All calculations exclude any diversification effects.

For with-profits and health LoBs, the underwriting risks are explicitly identifiable as the with-profits ring-fenced fund has its own SCR calculation and health underwriting risks are calculated separately from life underwriting risks. For unit linked and other LoBs, the risk margin is split in line with the notional SCR for each LoB.

D.2.2 Level of uncertainty within the technical provisions

In terms of the BEL calculation, a characteristic of the discounted cash-flow technique which is core to the requirements is the reliance on assumptions regarding future experience. Any such assumptions are inherently uncertain, although detailed analysis is applied to mitigate the risk of misestimating.

D. VALUATION FOR SOLVENCY PURPOSES (CONTINUED)

D.2 Technical provisions (continued)

D.2.3 Comparison of technical provisions valuation methods, bases, assumptions and values for solvency purposes and IFRS

A comparison of the technical provisions under both IFRS and Solvency II bases is shown in the table below. All figures are net of reinsurance.

31 December 2018		SPI With-Profit Fund	SPP With-Profit Fund	Remaining Part	Total
	Note	£'000	£'000	£'000	£'000
IFRS technical provisions	1	17,500	265,296	1,921,072	2,203,868
Allow negative provisions	2	–	–	(71,093)	(71,093)
Changes to assumptions	3	(51)	(1,164)	(12,385)	(13,600)
Contract boundary restrictions	4	–	–	13,224	13,224
Other adjustments for SII	5	(1,591)	2,623	(4,495)	(3,463)
SII BEL + TP as a whole		15,858	266,755	1,846,324	2,128,937
SII risk margin	6	1,149	2,104	25,795	29,048
SII technical provisions		17,007	268,859	1,872,119	2,157,985

31 December 2017		SPI With-Profit Fund	SPP With-Profit Fund	Remaining Part	Total
	Note	£'000	£'000	£'000	£'000
IFRS technical provisions	1	20,869	285,236	2,250,658	2,556,763
Allow negative provisions	2	–	–	(106,670)	(106,670)
Changes to assumptions	3	105	(1,248)	4,273	3,129
Contract boundary restrictions	4	–	–	14,577	14,577
Other adjustments for SII	5	(2,416)	(914)	(19,688)	(23,019)
SII BEL+ TP as a whole		18,558	283,073	2,143,149	2,444,780
SII risk margin	6	965	1,575	31,419	33,958
SII technical provisions		19,522	284,648	2,174,568	2,478,738

The main differences between the two bases can be explained as follows:

- **Note 1** IFRS technical provisions continue to be largely based on the Solvency I regime. The main difference is the inclusion of an additional cost of guarantee ('CoG') reserve in each of the with-profit funds which aims to better model the guarantees to which the funds are exposed.
- **Note 2** Negative provisions are not allowed under IFRS, but are permitted under SII. This restriction under IFRS also extends to the non-unit reserves held in respect of unit-linked insurance contracts. So, for insurance contracts where it is expected that the future charges will outweigh the future expenditure, the SII BEL can be less than the policyholder value of units whereas the IFRS provisions cannot be.
- **Note 3** Many demographic assumptions are modelled under IFRS with a margin of prudence above the corresponding SII assumption. Despite this some assumptions are more prudent under SII, such as the unit growth rates which are prescribed by EIOPA.
- **Note 4** Under Solvency II it is a requirement to establish contract boundaries to determine whether an insurance obligation or reinsurance obligation is to be treated as existing or future business (with only existing business considered in scope for the calculation of technical provisions). The impact shown above primarily relates to products with reviewable premiums, whereby the next premium review date is considered to be the termination date of the contract for the purposes of calculating technical provisions under Solvency II.
- **Note 5** This represents the impact of other changes in methodology that have been introduced under Solvency II. For example, under IFRS the unit-linked reserves are calculated as the sum of a unit reserve and a sterling reserve and the non-linked reserves are calculated using a net premium approach, whereas in both cases the Solvency II BEL is calculated using a discounted cash flow approach.
- **Note 6** The risk margin does not exist under IFRS and so is an additional technical provision under Solvency II.

D. VALUATION FOR SOLVENCY PURPOSES (CONTINUED)

D.2 Technical provisions (continued)

D.2.4 Use of long term guarantee package

The implementation of Solvency II permitted the use of a number of adjustments, referred to as the “long term guarantee package”. The company’s use of the individual components within the long term guarantee package has been outlined below:

- **Matching adjustment:** This has not been applied by the company.
- **Volatility adjustment:** This has not been applied by the company.
- **Transition risk-free interest rate-term structure:** This transitional measure has not been applied by the company.
- **Transitional deduction to technical provisions:** This transitional measure has not been applied by the company.

D.2.5 Reinsurance recoverables

This section provides a description of the recoverables from the reinsurance contracts. All reinsurance agreements are denominated in GBP.

Value of reinsurance recoverables

A breakdown of the value of reinsurance recoverables, by line of business, has been provided in section D.2.1 above.

Methodology and assumptions

The methodology and assumptions used for calculating the value of reinsurance recoverables is identical to that used for the calculation of the BEL with the cash flow items being the reinsurer’s share of all cash in-flows and out-flows.

Adjustment for expected default

The gross reinsurance recoverables are adjusted to take account of expected losses due to default of the reinsurance counterparty.

Methodology

The adjustment to take account of expected losses due to default of a reinsurance counterparty is calculated as the present value of the lost reinsurance recoverables due to reinsurer default. It therefore relates to the stream of future reinsurance recoverables and to the probability of default in each future time period. The calculation is carried out separately for each reinsurer. The loss on default is limited to a percentage of the recoverables from the time of default onwards (loss given default or LGD%), based on the collateral arrangements of the specific reinsurance arrangement. The LGD% is a subject to a minimum of 50%.

Assumptions

In the above methodology, the recoverables and discount factors used are as defined previously. Additional assumptions required are the probability of default, and the percentage recovery rate. The probability of default is derived with reference to the credit rating of the reinsurer. Tables of default probabilities corresponding to credit ratings are obtained from a credit ratings agency.

The maximum 50% recovery rate upon default is defined in regulation. Whilst a recovery rate of greater than 50% is not permitted, CA plc uses a rate lower than 50% where its assessment identifies reason to believe that 50% recovery on default would not be reliable.

D.2.6 Changes in assumptions

The methodology for setting the assumptions for the Solvency II calculations as at 31 December 2018 is generally unchanged from the valuation as at 31 December 2017.

Solvency II regulations require a probability-weighted basis for the experience assumptions. To achieve this, we have taken account of:

- experience in recent years;
- trends observed in recent years; and
- any other known or likely factors that may affect future behaviour.

As a rule, we have assumed recent experience (over the last few years) represents the central position for the probability weighted assumption, unless there are reasons why this is considered not immediately appropriate. To do this, actual experience is reviewed in comparison with expected experience, with a trigger for serious consideration to be given to amending an assumption when it deviates materially.

D. VALUATION FOR SOLVENCY PURPOSES (CONTINUED)

D.2 Technical provisions (continued)

D.2.6 Changes in assumptions (continued)

Key assumption changes applied in 2018 include:

Economic	Updated EIOPA yield curves utilised plus updates to inflation parameters.
Mortality	Mortality assumptions have been reviewed to take account of recent investigations and it was proposed to leave the assumptions for assurance mortality unchanged, recognising that the experience is reasonably stable. However, the basis for annuitant mortality has been updated to move to the CMI2016 model.
Persistency	Persistency assumptions have been reviewed to take account of recent investigations. Generally, the changes reflect: <ul style="list-style-type: none">• a weakening of assumptions on a number of life products that have experienced a trend for lapse rates to reduce over recent years;• a greater emphasis on experience on pension products since the introduction of pension freedoms in 2015; and• consideration of the impact from the introduction of the capping of exit charges on pensions.
Expenses	Expense assumptions have been reviewed to reflect the latest management assessment of projected costs. Additionally, where reserves were being held in respect of VAT that is not actually paid, such reserves are no longer being held.

D. VALUATION FOR SOLVENCY PURPOSES (CONTINUED)

D.3 Other liabilities

The table below shows separately the value of each class of liabilities under Solvency II and IFRS values.

	Note	31 December 2018		31 December 2017	
		Solvency II value	Statutory accounts value	Solvency II value	Statutory accounts value
		£'000	£'000	£'000	£'000
Other liabilities					
Provisions other than technical provisions	3.1	32	32	24	24
Deferred tax liabilities	3.2	8,761	507	14,349	656
Derivatives ¹	3.3	1,239	1,239	88,000	88,000
Debts owed to credit institutions ²	3.4	975	975	–	–
Insurance & intermediaries payables	3.5	58,713	58,713	55,669	55,669
Reinsurance payables	3.6	463	463	516	516
Payables (trade, not insurance)	3.7	18,440	18,440	19,713	19,713
Any other liabilities, not elsewhere shown	3.8	–	4,158	–	4,952
Total liabilities		88,623	84,526	178,271	169,530

¹there was a change in presentation during 2018. Derivatives are now netted off against each contract, and therefore the asset and liability values have dropped in comparison to the prior year. There has been no change to the valuation methodology.

²a presentation change to show non-linked overdraft balance separately from cash and cash equivalent. Prior year this was part of the cash and cash equivalent balance.

Bases, methods, assumptions and inputs used in liability valuation for Solvency purposes, and difference between the amounts recorded in the financial statements

In general, liabilities are recognised and valued for solvency purposes in line with IFRS accounting principles and consequently valued at fair value. For liabilities valued using market value, CA plc relies on quoted prices in active markets to value its investments. Quoted market prices in an active market provide the most reliable evidence of fair value and are used without adjustment to measure fair value whenever available. The company assesses whether markets are active by considering both the frequency and volume of trades and whether these are sufficient to provide appropriate pricing information.

Further detail by material liability class has been provided below.

D.3.1 Provisions other than technical provisions:

Basis and methods for IFRS valuation

Provisions other than technical provisions represent small residual balances held in respect of historical complaint redress provisions and are measured at fair value. Where the effect of the time value of money is material, the amount of the provision is the present value of the expenditure expected to be required to settle the obligation.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation

An estimation of future costs required to settle the obligation is required, together with an estimate of the future economic benefits to be derived from the contracts under-pinning the need for a provision.

Inputs for IFRS valuation

Net present value of future cash flows calculation.

Solvency II valuation

There are no differences between the IFRS and SII valuation methods.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D. VALUATION FOR SOLVENCY PURPOSES (CONTINUED)

D.3 Other liabilities (continued)

D.3.2 Deferred tax liabilities

Basis and methods for IFRS valuation

Deferred tax liabilities are recognised in the IFRS balance sheet in accordance with IAS12. Deferred tax is provided using the balance sheet liability method, providing for temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes.

The IFRS deferred tax liability is comprised of the tax on the profit arising on the transition to the new tax regime in 2012, which is expected to run-off over a ten year period, together with temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes, namely deferred acquisition costs (DAC) and deferred income (DIL). The deferred tax in respect of deferred acquisition costs is amortised over the expected lifetime of the underlying investment management service contract. Deferred tax in respect of deferred income is amortised over the expected period over which it is earned.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation

The amount of deferred tax provided is based on the expected manner of realisation or settlement of the carrying amount of assets and liabilities, using tax rates enacted or substantively enacted at the balance sheet date.

Inputs for IFRS valuation

- Enacted or substantively enacted tax rates at the balance sheet date; and
- Identified temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes.

Solvency II valuation

The valuation of deferred tax liabilities under Solvency II follows the same recognition criteria applied under IAS12 for statutory reporting purposes.

Valuation differences arising from the application of Solvency II recognition principles will be taxed at the prevailing deferred tax rate. These include the deferred tax arising on the valuation difference in the technical provisions between IFRS and Solvency II and the removal of deferred tax balances in respect of DAC and DIL, which are not recognised under Solvency II valuation principles.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D.3.3 Derivatives

Basis and methods

Derivative financial instruments are measured at fair value and comprise forward exchange contracts. The fair value of forward exchange contracts is their quoted market price at the balance sheet date, being the present value of the quoted forward price.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty)

No significant assumptions or judgements are made in the valuation of these assets, as they are based upon market observable inputs.

Inputs

Observable market prices.

Solvency II valuation

There are no differences between IFRS and SII for valuation purposes.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis of derivatives. However, for SII purposes, derivatives are now being disclosed in the balance sheet on a net basis (net of both cash flow legs of the derivative) rather than in 2017, where the asset and liability legs were shown separately. The 2018 balance sheet presentation is now in line with IFRS.

D. VALUATION FOR SOLVENCY PURPOSES (CONTINUED)

D.3 Other liabilities (continued)

D.3.4 Debts owed to credit institutions

Basis and methods for IFRS valuation

Debt owed to credit institutions includes bank overdraft and unpaid cheques.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation:
None.

Inputs for IFRS valuation

- Bank and term deposit statements.
- Bank reconciliation timing differences.

Solvency II valuation

There are no differences between the IFRS and SII valuation methods.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D.3.5 Insurance and intermediaries payables

Basis and methods for IFRS valuation

Insurance and intermediaries payables represent outstanding accrued policyholder claims and are measured on initial recognition at the fair value of the liability to be paid. Given the short term nature of these liabilities, no discounting is required to arrive at the initial fair value.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation
None.

Inputs for IFRS valuation

The actual amount of the outstanding liability or the best estimate of the liability to be settled.

Solvency II valuation

There are no differences between the IFRS and SII valuation methods.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D.3.6 Reinsurance payables

Basis and methods for IFRS valuation

Reinsurance payables represent amounts due to reinsurers arising from the application of reinsurance treaty obligations and are measured at fair value, taken as the carrying value at the balance sheet date, which is based upon reinsurance account statements. Reinsurance balances are settled in line with the underlying treaty settlement arrangements.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation
None.

Inputs for IFRS valuation

Reinsurance accounts prepared in accordance with the provisions contained within the underlying reinsurance treaties.

Solvency II valuation

Reinsurance payables are valued in SII on the same basis as for IFRS.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D. VALUATION FOR SOLVENCY PURPOSES (CONTINUED)

D.3 Other liabilities (continued)

D.3.7 Payables (trade, not insurance)

Basis and methods for IFRS valuation

Trade payables consist of accrued expenses and other trade related outstanding balances and are measured at fair value, taken as the carrying value at the balance sheet date based upon invoiced amounts due for settlement. Trade payables are settled in line with trade payment terms, usually within 30 days.

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation

None.

Inputs for IFRS valuation

The actual amount payable based upon invoices or statements received or a best estimate of the amount payable as at the balance sheet date.

Solvency II valuation

There are no differences between the IFRS and SII valuation methods.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D.3.8 Any other liabilities, not elsewhere shown

Basis and methods for IFRS valuation

Other liabilities, not elsewhere shown are measured at fair value, taken as the carrying value at the balance sheet date. For IFRS reporting purposes, this balance represents "Reinsurers' share of deferred acquisitions costs" and "Deferred income".

Assumptions and judgments (including future estimates and major sources of estimate uncertainty) for IFRS valuation

None.

Inputs for IFRS valuation

Invoices, statements or valuations of the liability as at the balance sheet date.

Solvency II valuation

These items have a nil value for SII reporting purposes as they are linked to intangible assets that are not recognised on the SII balance sheet.

Changes made to the recognition and valuation bases used or on estimations made during the year

During the year, there were no changes made to the recognition or valuation basis or estimation processes for both IFRS and Solvency II purposes.

D.4 Alternative methods for valuation

The company does not hold any assets for which alternative methods of valuation are required.

D.5 Any other information

There is no other material information regarding the valuation of assets and liabilities that is deemed necessary to report.

E. CAPITAL MANAGEMENT

E.1 Own Funds

E.1.1 Objectives, policies and processes used for managing Own Funds

Background

Own Funds represents the type and level of capital that is held by the company to be able to meet its solvency capital requirement. The company is required to hold Own Funds of sufficient quantity and quality in accordance with the Solvency II, Pillar 1 rules which sets out the characteristics and conditions for Own Funds. Further information on the objectives, policies and processes for managing Own Funds has been provided below.

Objectives

The objectives of the company in managing its Own Funds are as follows:

Business strategy consistency

The management of Own Funds needs to align with the strategy of the company. The company's core strategic objective is to efficiently run off the existing life and pensions portfolios. In doing this, management's focus is to:

- Manage the capital and value position of the company effectively;
- Focus on customer outcomes;
- Deliver strong governance; and
- Adhere to the core culture and values of the company.

In this regard, the objectives of managing Own Funds are:

- to hold sufficient levels of capital to safeguard the interests of policyholders, which is core to **delivering fair customer outcomes**;
- to hold appropriate levels of capital as a foundation for making sound business decisions, which is central to delivering our **good governance** objective;
- to have a policy in place that describes the parameters that are considered in the context of dividend distributions, which supports the **delivery of returns to the company's shareholder**;
- to strike a balance between holding too much capital and too little capital when **optimising the balance sheet**; and
- to provide a good foundation for further **UK acquisitions**.

Risk appetite

- to establish a policy that reflects the board's risk appetite with regards to the level of Own Funds held.

Risk tolerances

- to set tolerance levels associated with the board's risk appetite regarding Own Funds and ensure that these are monitored.

Policies

Central to managing the Own Funds of the company is the application of the company's capital management policy. The policy is built around the objectives outlined above and is reviewed and approved at least once per year by the board. The policy also incorporates:

- The roles and responsibilities of the board and different levels of management in adhering to the policy;
- The reporting procedures in place with regards to adhering to the policy; and
- The key controls and processes in place to ensure adherence to the policy.

The company's capital management policy includes the following qualitative and quantitative statements regarding managing the company's Own Funds:

- **Board risk appetite:** CA aims to minimise the risk of being unable to meet its regulatory capital requirements by maintaining a capital buffer above the regulatory capital requirements. The adequacy of the capital buffer is reviewed and tested as part of the ORSA each year by running a range of stresses and scenarios.
- **Dividend paying limit:** Stated as Own Funds as a percentage of SCR, the company's dividend paying limit is 120%. This is the point at which a dividend would cease to be paid, until at such time the solvency position was restored above this point.
- **Management actions limit:** Stated as Own Funds as a percentage of SCR, the company's management actions limit is 110%. This is the point at which, should Own Funds fall below this level, additional management actions would be taken to restore Own Funds back above this level. In essence, this represents an internal 'ladder of intervention limit' that is set by the board.

To put these definitions in context, this means that, in the normal course of events, the company will not pay a dividend should the payment of the dividend take the company Own Funds to below 120% of its SCR. Should Own Funds fall below 110% of SCR, additional management actions will be taken. It should be noted though that in extremis, subject to continuing to cover 100% of SCR, the above limits could be waived if it became necessary to support another insurance company in the Chesnara group, if it was unable to cover its SCR, and no other funds within the group were available to provide this support. In line with documented management action protocols, in this situation, management actions to improve the solvency position would be considered.

E. CAPITAL MANAGEMENT (CONTINUED)

E.1 Own Funds (continued)

E.1.1 Objectives, policies and processes used for managing Own Funds (continued)

Processes and controls

The following key process and controls are in place regarding how the company manages its Own Funds:

Internal reporting

A number of reports are produced internally for both the Executive Committee and/or board that include reporting on the Own Funds position of the company. These reports support the board, which has ultimate responsibility for the company's capital management and capital allocation, in managing the company's Own Funds.

- **Quarterly Finance Director's report:** This report provides various financial information, including solvency position and movement analysis. Numerical analysis supported by commentary is provided for both the Own Funds and SCR movements that contribute to the overall movement in the solvency position of the company.
- **Quarterly actuarial report:** This report provides further detailed analysis and insight into the quarterly solvency valuation, covering assumptions and key reasons for any movements in solvency compared with previous periods.
- **CA business plan:** A three year business plan is prepared annually and presented to the board. The business plan includes solvency projections over the planning horizon that are prepared on the basis of applying the company's capital management policy.
- **ORSA:** An ORSA report is produced annually. Amongst other things, the ORSA includes solvency capital projections over the business planning horizon, which are based on applying the company's capital management policy. The ORSA also includes supporting justification for the dividend paying buffer that is included within the company's capital management policy and shows the triggers that are assessed for the purpose of intra-quarter solvency monitoring.
- **Annual dividend assessment paper:** Dividends are typically paid and approved once per year. A paper is sent to the board supporting the recommendation, which includes specific application of the company's capital management policy.
- **Assessment of surplus transfer from with-profit funds:** As and when it is assessed that there is surplus within a with-profit fund that may be potentially transferred out of the fund, an assessment paper is prepared. The paper includes, amongst other things: a quantitative assessment of the level of transfer proposed in the context of the board's risk appetite with regards to the level of capital to be retained in the fund post transfer; how the PPFM has been followed; and a confirmation that the transfer has been approved by the with-profit actuary and With-Profit Committee approval.
- **Quarterly risk report:** A risk report is produced quarterly that, amongst other things, includes reporting on the solvency position of the company as a whole and the SPI and SPP ring-fenced funds within the company, and how their solvency position accords with the stated risk appetite. It also evidences to the Audit & Risk Committee that the solvency monitoring protocol and triggers have been monitored frequently and the continuous solvency monitoring protocol has been followed.
- **With-Profit Actuary report:** A report that shows that the company has complied with the PPFM in respect of how the with-profit funds have been managed from a capital perspective.
- **Risk indicator / trigger assessments:** For the purpose of intra-quarter solvency monitoring, a list of risk indicators has been identified, which are monitored. The frequency by which the risk indicators are tracked depends on the solvency position of the company.
- **Monthly solvency estimates:** Full solvency calculations are performed on a quarterly basis. For intra-quarter periods, a monthly solvency estimate may be produced if the circumstances arise. For example, if the capital position was close to the minimum capital buffer, if there were exceptional market movements or if the continuous solvency monitoring measures indicated the need.
- **Recovery management protocol and management actions:** On an annual basis, a recovery protocol document is signed off by the board. The protocol, in effect, represents an internally set "ladder of intervention", which sets out protocols for items such as solvency monitoring frequency, what escalations need to be performed and what potential actions need to be considered and when.

Business planning

The company produces a three year business plan once per year. The business plan incorporates financial projections of the company's Own Funds and solvency capital requirements over a slightly longer five year projection period.

The most recent business plan, being the 2019 to 2021 plan, does not anticipate any material changes to the structure of Own Funds over the planning horizon.

E. CAPITAL MANAGEMENT (CONTINUED)

E.1 Own Funds (continued)

E.1.2 Analysis of Own Funds

The below table provides information, split by tier, on the structure, amount and quality of Own Funds at the end of 2018 and 2017, including an analysis of any significant changes in each tier over the year:

	31 December 2017 £'000	Movement in year £'000	Transfers £'000	31 December 2018 £'000
Tier 1				
Ordinary share capital	40,000	–	–	40,000
Total ordinary share capital	40,000	–	–	40,000
Reconciliation reserve before deductions	185,229	(2,822)	(32,000)	150,407
Assets less liabilities	225,229	(2,822)	(32,000)	190,407
Foreseeable dividends	(32,000)	(59,000)	32,000	(59,000)
Restricted Own Funds in ring fenced funds	(26,543)	(5,929)	26,800	(5,672)
Total tier 1 Own Funds	166,686	(67,751)	26,800	125,735
SCR	128,060	(31,469)	–	96,591
Ratio of eligible Own Funds to SCR	130.2%			130.2%
MCR	32,015	(6,265)		25,750
Ratio of eligible Own Funds to MCR	520.6%			488.3%

Own Funds analysis

- Own Funds of the company comprises tier 1 share capital and the reconciliation reserve.
- Share capital and the reconciliation reserve have been classified as tier 1 as they are fully available to be able to absorb losses. Dividends payable to shareholders are fully cancellable or deferrable up to the point of payment.
- There were no changes in classification of Own Funds during the year.
- The company does not have any non-tier 1 Own Funds items, either at the start or the end of the year.
- Movements in eligible Own Funds during the year have arisen from:
 - *Own Funds surplus emergence:* Over time surpluses or deficits can emerge as the substantially closed book runs off, and arise from experience differing to what was assumed in the opening valuation. During 2018, a decline of Own Funds before dividends of £2.8m resulted, driven largely by a poor equity market performance during the second half of 2018.
 - *Movements in ring fenced funds restrictions:* The company has two ring fenced funds. Surpluses in these funds are restricted, and therefore, as the surpluses move this affects the amount of Own Funds available to meet the SCR and MCR. During 2018, a capital transfer of £26.8m from with profit ring fenced funds (SPI £0.8m and SPP £26.0m) to the non profit fund took place. This improved the capital position in the year. After the capital transfer, a further £5.7m of surplus arose in the ring fenced funds.
 - *Foreseeable dividends and dividend distributions:* As dividends are foreseen and subsequently paid, this reduces the Own Funds of the company. For the year ended 31 December 2018 a £59.0m (2017: £32.0m) year-end dividend was approved. This is due to be paid during 2019.

Own Funds to cover SCR:

- The above table shows that the company, which only has tier 1 capital, has £126.1m (2017: £166.7m) of available Own Funds to be able to meet the company's SCR of £96.6m (2017: £128.1m), resulting in an SCR coverage ratio of 130.2% (2017: 130.2%).

Own Funds to cover MCR:

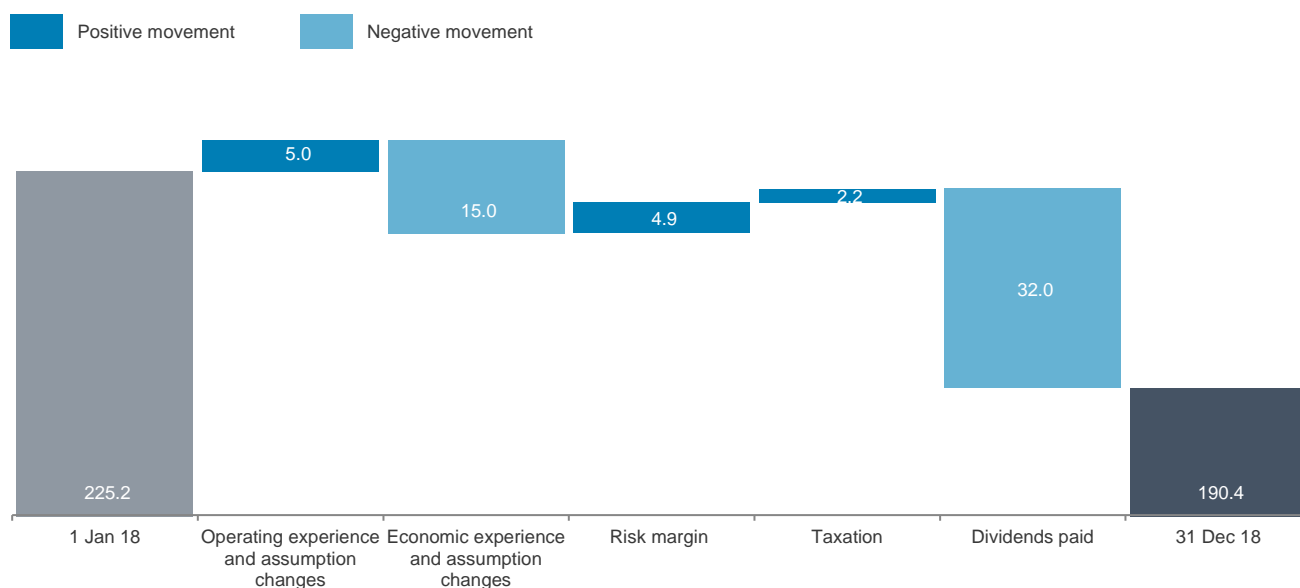

- The above table shows that the company, which only has tier 1 capital, has £125.7m (2017: £166.7m) of available Own Funds to be able to meet the company's MCR of £25.8m (2017: £32.0m), resulting in a MCR coverage ratio of 488.3% (2017: 520.6%).

E. CAPITAL MANAGEMENT (CONTINUED)

E.1 Own Funds (continued)

E.1.2 Analysis of Own Funds (continued)

The chart below analyses the movement in assets less liabilities during the year (in £m).

The reasons for the changes in Own Funds over the reporting period are analysed in more detail below:

- **Operating experience and assumption changes:** This relates to how the underlying performance of the company differs to the expectations of that performance. The positive performance is driven from various sources including a reduction in assumed future costs, a weakening in assumed annuitant mortality and a small change in lapse assumptions, which has led to an overall reduction in technical provisions. Operating variances have been positive overall, with the release of contract boundaries contributing to the operating surplus in the year.
- **Economic experience and assumption changes:** This relates to the performance of assets and liabilities as a result of market factors, such as investment return on the assets that are held by the company. The poor performance of equity markets over 2018 has led to a reduction in the expected future value of fund-based charges and this is the key driver of the loss shown above. It is offset slightly by an increase in the swap-based discount rates used in the calculation of technical provisions.
- **Risk margin:** This reflects the release of risk margin, which is partly driven by a reduction in capital requirements during the year and partly driven by improvements to the projection of capital requirements in the risk margin calculation.
- **Taxation:** This reflects the corporation tax as per the balance sheet.
- **Dividends paid:** This reflects the dividend that was paid during the year.

E.1.3 Differences between equity in the financial statements and excess of assets over liabilities as calculated for solvency purposes

The below table analyses the difference between the equity in the financial statements and the excess of assets over liabilities as calculated for solvency purposes at 31 December 2017 and 31 December 2018:

	31 December 2018 £'000	31 December 2017 £'000
Equity per the IFRS financial statements:		
Share capital	40,000	40,000
Retained earnings	110,674	118,400
Total equity as reported in the CA plc IFRS financial statements	150,674	158,400
Adjustments between IFRS financial statements and excess of assets over liabilities for solvency purposes:		
Adj 1: Net valuation difference between IFRS and SII for net technical provisions	46,328	78,523
Adj 2: Removal of intangible assets included in IFRS valuation	(1,831)	(2,204)
Adj 3: Adjustments to deferred tax	(8,254)	(13,693)
Adj 4: Other adjustments	3,490	4,203
Total adjustments between IFRS financial statements and excess of assets over liabilities for solvency purposes	39,733	66,829
Excess of assets over liabilities for solvency purposes (reconciliation reserve before deductions plus ordinary share capital):	190,407	225,229

E. CAPITAL MANAGEMENT (CONTINUED)

E.1 Own Funds (continued)

E.1.3 Differences between equity in the financial statements and excess of assets over liabilities as calculated for solvency purposes (continued)

Explanations of adjustments:

- *Adjustment 1:* This adjustment relates to the differences between IFRS and Solvency II in the way the liabilities for insurance contracts are calculated. This difference is primarily due to two key factors: (1) Solvency II permits the calculation of technical provisions to include an estimate of the future profits expected to emerge from the contracts in-force at the valuation date, which is not permitted under IFRS reserving; and (2) IFRS reserves are calculated using a prudent estimate, whereas Solvency II requires technical provisions to be determined on a “best estimate” basis. This has resulted in the technical provisions under Solvency II being lower than under IFRS. These differences are offset by the existence of the risk margin, which the company must hold as a liability in the balance sheet under Solvency II, whereas it was not required under IFRS.
- *Adjustment 2:* Intangible assets within the company comprises deferred acquisition costs and acquired value of in-force business. These intangible assets are valued at zero in line with Solvency II rules.
- *Adjustment 3:* The valuation of deferred tax assets under Solvency II follows the same recognition criteria applied under IFRS. However, because of differences arising due to adjustments 1, 2 and 4, an additional deferred tax liability is required to be recognised.
- *Adjustment 4:* Other adjustments comprise of deferred income and reinsurer shares of deferred acquisitions cost. These items under the Solvency II reporting valuation have a nil value.

E.1.4 Items deducted from Own Funds

The table below illustrates the deductions that are applied to Own Funds

	31 December 2018 £'000	31 December 2017 £'000
Assets less liabilities	190,407	225,229
Adjustments for:		
Surplus in ring-fenced funds	(5,672)	(26,543)
Foreseeable dividends	(59,000)	(32,000)
Own Funds	125,735	166,686

Surplus in ring-fenced funds in accordance with Article 81 of delegated acts

The company has two ring-fenced funds: Save & Prosper Insurance (SPI) and Save & Prosper Pensions (SPP). Under Solvency II rules, the surpluses within these funds cannot contribute to the overall solvency assessment. At 31 December 2018, the surplus in each of these funds was: SPI - £nil (2017: £0.9m) and SPP – 5.7m (2017: £25.7m).

Foreseeable dividends

Solvency II requires dividends to be recognised as a deduction to Own Funds when they are “foreseeable”. At 31 December 2018, a foreseeable dividend, representing the dividend which is due to be paid during 2019, was recognised within the Solvency II valuation.

E. CAPITAL MANAGEMENT (CONTINUED)

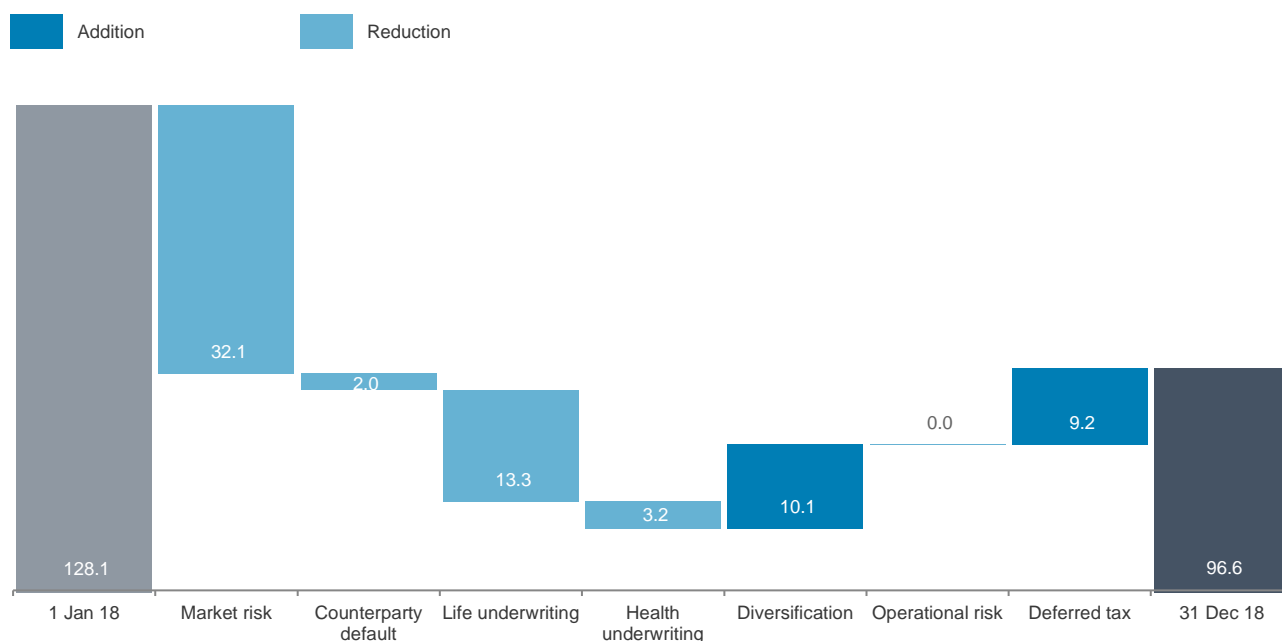

E.2 Solvency Capital Requirement and Minimum Capital Requirement

E.2.1 SCR and MCR analysis

The information below provides some further detail of the solvency capital requirement and minimum capital requirement for the company at both the start and the end of the year. Explanations have been provided in narrative below the table regarding any significant changes in the year. In addition:

- The company has applied the Standard Formula in calculating its capital requirement, both at the start and the end of the year;
- The company does not use any simplified calculations in any risk modules or sub-modules and the company does not use any undertaking-specific parameters.
- No capital add-ons have been imposed on CA plc by the PRA.

The movement of SCR during the year (in £m)

SCR

	Note	31 December 2018 £'000	31 December 2017 £'000	Changes in the year £'000
Market risk	1	63,697	95,822	(32,125)
Counterparty default risk	2	8,514	10,519	(2,005)
Life underwriting risk	3	55,911	69,233	(13,322)
Health underwriting risk	4	9,127	12,360	(3,233)
Diversification	5	(32,058)	(42,120)	10,062
Basic Solvency Capital Requirement		105,191	145,814	(40,623)
Operational risk	6	3,798	3,821	(23)
Loss-absorbing capacity of deferred taxes	7	(12,398)	(21,575)	9,177
Solvency Capital Requirement excluding capital add-on		96,591	128,060	(31,469)
Solvency capital requirement		96,591	128,060	(31,469)
Notional SCR for remaining part:	8	73,887	93,502	(19,615)
Notional SCR for ring fenced funds	9	22,704	34,558	(11,854)

The reasons for the changes in SCR over the reporting period are analysed in more detail below:

- **Note 1:** The fall in market risk is mainly due to a significant reduction in equity risk, due to a fall in equity markets towards the end of the year. This also has a knock-on impact on currency risk, owing to exposures in overseas equities. Additionally, spread risk reduced mainly due to a reduction in spread exposure.
- **Note 2:** The moderate reduction in counterparty default risk is partly due to a reduction in cash exposure and partly due to a small improvement in the overall creditworthiness of the remaining cash and liquidity holdings.
- **Note 3:** The fall in life underwriting risk capital is primarily due to a fall in mass lapse risk. This mainly stems from the fall in equity markets, which reduces the future profitability of unit-linked contracts, thereby reducing the future profits that are lost under a mass lapse shock. There has also been an improvement in how expenses are modelled under a mass lapse shock.
- **Note 4:** The fall in health underwriting risk capital is primarily due to a fall in mass lapse risk, with the reason being the same as for life underwriting risk.

E. CAPITAL MANAGEMENT (CONTINUED)

E.2 Solvency Capital Requirement and Minimum Capital Requirement (continued)

E.2.1 SCR and MCR analysis (continued)

- **Note 5:** The absolute amount of the diversification benefit has fallen as a consequence of the reduction in the total risk capital for market risk, counterparty default risk, life underwriting risk & health underwriting risk.
- **Note 6:** The change in this metric is immaterial.
- **Note 7:** The loss-absorbing capacity of deferred taxes has reduced since last year due to a reduction in both the value of the deferred tax liability on the Solvency II balance sheet and the full-year taxable profits versus last year.
- **Note 8:** The increase in the notional SCR for the remaining part is attributable to just over half the fall in market risk, and most of the fall in counterparty default risk and underwriting risk.
- **Note 9:** The decrease in the notional SCR for ring fenced funds is attributable to just under half of the fall in market risk.

MCR

The MCR is calculated in line with the Solvency II Delegated Acts whose inputs include the technical provisions, net capital at risk and SCRs. The table below provides information on the inputs to the MCR calculation and present the opening and closing MCR, along with analysis of movement in the year.

	Note	31 December 2018 £'000	31 December 2017 £'000	Change in the year £'000
Linear MCR	1	25,750	28,579	(2,829)
SCR	2	96,591	128,060	(31,469)
MCR cap (45% of SCR)	3	43,466	57,627	(14,161)
MCR floor (25% of SCR)	4	24,148	32,015	(7,867)
Combined MCR	5	25,750	32,015	(6,265)
Absolute floor of the MCR (€3.7m)	6	3,288	3,251	37
Minimum Capital Requirement		25,750	32,015	(6,265)

The reasons for the changes in MCR over the reporting period are analysed in more detail below:

- **Note 1:** The Linear MCR is calculated as prescribed in the Solvency II Delegated Acts taking into account the prescribed formula and split of technical provisions. The decrease shown above is the impact of a decrease in both the BEL and the total capital at risk, both of which contribute to the prescribed calculation.
- **Note 2:** The decrease in the SCR is described in more detail in the commentary above.
- **Note 3:** The MCR cap is calculated as 45% of the SCR, thus its movement is explained by the movement in the SCR.
- **Note 4:** The MCR floor is calculated as 25% of the SCR, thus its movement is explained by the movement in the SCR.
- **Note 5:** The Combined MCR is calculated as the value of the linear MCR after applying the MCR cap and MCR floor. In this case the linear MCR is just above the MCR floor and so no adjustment to the linear MCR is required.
- **Note 6:** The Absolute Floor is prescribed by EIOPA in Euros (€3.7m for CA plc) and any movement over the year is driven by the GBP:EUR exchange rate which is prescribed by the PRA. In this case, due to a slight weakening of GBP over 2018, the value of the absolute floor has decreased over the year.
- **Note 7:** The Minimum Capital Requirement is calculated as the higher of the Combined MCR and the Absolute Floor. For CA plc it is normally expected that the Combined MCR will be higher and this is the case here.

E.2.2 Loss absorbing capacity of deferred tax (LACDT)

The LACDT is an adjustment to the Basic SCR to reflect the change in deferred taxes that would arise following an instantaneous loss broadly equal to the sum of the Basic SCR and operational risk amount. It is made up of three principal components:

- An allowance for the loss carryback from which CA plc would theoretically benefit by offsetting any tax losses arising from a significant loss event against taxable profits arising in the prior year;
- An allowance for any deferred tax liability held on the balance sheet, which could theoretically be offset against tax losses arising from a significant loss event; and
- An allowance for the tax offset on any other future expected profits not already captured in the deferred tax liability.

E. CAPITAL MANAGEMENT (CONTINUED)

E.3 Use of the duration-based equity risk sub-module in the calculation of the Solvency Capital Requirement

The duration-based equity risk sub-module is not used by CA plc.

E.4 Differences between the Standard Formula and any internal models used

The company uses the Standard Formula for calculating its capital requirements, and therefore this section does not apply to the company.

E.5 Non-compliance with the MCR and significant non-compliance with the SCR

CA plc has met its SCR and MCR at all times during the year.

E.6 Any other information

There is no other information regarding the capital management of the company that is deemed material to report.

F. GLOSSARY OF TERMS

AML	Anti-Money Laundering
Basic Own Funds	Basic Own Funds – in accordance with the UK’s regulatory regime for insurers it is the sum of the individual capital resources for each of the regulated related undertakings less the book-value of investments by the company in those capital resources.
Best Estimate Liability (BEL)	Best Estimate Liability - The expected value of all future cash flows generated from current insurance contracts discounted to allow for the time value of money using the Risk-Free Rate. The cash flows include premium income, expense outgo, tax, benefit payments and all cash flows relating to the policyholders’ unit-linked investment portfolios. The assumptions used in the calculation are realistic - neither prudent nor optimistic.
CA / CA plc	Countrywide Assured plc – ‘The Company’.
Cash generation	Cash generation is a measure of how much distributable surplus has been generated in the period, which supports the ability of the company to pay its dividends. It is driven by the change in solvency surplus, taking into account board-approved capital management policies.
CWA	City of Westminster Assurance Company Limited
Delegated Acts	Delegated Act: Commission Delegated Regulation (EU) 2015/35 of 10 October 2014.
EcV	Economic Value (EcV) is deemed to be a more meaningful measure of the long term value of the company and it generally approximates to Embedded Value reporting, which was used before the introduction of SII. In essence, the IFRS balance sheet is not generally deemed to represent a fair commercial value of our business as it does not fully recognise the impact of future profit expectations of long term policies. EcV is derived from Solvency II Own Funds and recognises the impact of future profit expectations from existing business.
EIOPA	European Insurance and Occupational Pensions Authority - An independent An independent advisory body to the European Parliament, the Council of the European Union and the European Commission. EIOPA was established in January 2011 and replaced CEIOPS (the Committee of European Insurance and Occupational Pensions Supervisors).
FCA	Financial Conduct Authority
FSMA	Financial Services and Markets Act 2000
IFRS	International Financial Reporting Standards
Key Function	The Solvency II Directive has defined four functions of the system of governance as key functions – Risk Management, Internal Audit, Actuarial and Compliance. Each key function is required to have a designated key function holder who will be subject to notification requirements to the regulator.
KFH	Key Function Holder
LACDT	Loss Absorbing Capacity of Deferred Taxes - An adjustment to the Basic SCR to reflect the change in deferred taxes that would arise following an instantaneous loss broadly equal to the sum of the Basic SCR and Operational Risk amount.
LGD	Loss given default.
MCR	Minimum Capital Requirement - An absolute minimum level of required capital below which supervisory intervention will automatically be triggered. The MCR is defined by a formula with a lower/upper bound of 25%/45% of the SCR respectively.
NED	Non-Executive Director
nSCR	Notional Solvency Capital Requirement
ORSA	Own Risk and Solvency Assessment
OSP	Outsource Service Provider
PL	Protection Life
PPFM	Principles and Practices of Financial Management
PRA	Prudential Regulation Authority

F. GLOSSARY OF TERMS

Prudent Person Principle	The rules governing how investments are to be made in line with the Solvency II requirements – Article 132 of the Solvency II Directive and associated regulations and guidance.
QRT	Quantitative Reporting Template
Reconciliation Reserve	a reconciliation reserve, being an amount representing the total excess of assets and liabilities reduced by the basic own-fund items included in Tier 2, Tier 3 and elsewhere in Tier 1.
Risk Margin	The measure added to the Best Estimate Liability to reflect the cost of holding capital over a period of run-off of the liabilities to ensure that the value of Technical provisions meets the amount that an independent organisation would require to take over and meet all the obligations arising from the existing business
S&P	Save & Prosper, made of two companies; Save & Prosper Insurance Limited and Save & Prosper Pensions Limited
SCR	Solvency Capital Requirement - In accordance with the UK's regulatory regime for insurers it is the sum of individual capital resource requirements for the insurer and each of its regulated undertakings
SFCR	Solvency and Financial Condition Report
Solvency II	A fundamental review of the capital adequacy regime for the European insurance industry. Solvency II aims to establish a set of EU-wide capital requirements and risk management standards and has replaced the Solvency I requirements.
SLAs	Service Level Agreements
SLT	Similar to Life insurance Techniques
Standard Formula	The set of prescribed rules used to calculate the regulatory SCR where an internal model is not being used. The high level structure of the Standard Formula is set out in the Solvency II Directive – further details of the formula are set out in the associated regulations.
Surplus Capital	The excess of Own Funds over the SCR
TCF	Treating customers fairly
Technical Provisions	The sum of the Best Estimate Liability and Risk Margin for existing business. The Technical Provisions are set at a level that an organisation would need to pay to another insurance organisation in order for them to fully accept the transfer of the related insurance obligations.
