You should remember that past performance is not a guide to the future. The price of investments and the income from them may go down as well as up and you may not get back the full amount invested. Investments in emerging markets may involve a higher element of risk due to political and economic instability and underdeveloped markets and systems. Investing in smaller companies may involve a higher degree of risk as markets are usually more sensitive to price movements. Exchange rate changes may cause the value of overseas investments to rise or fall. The value of property assets is a matter of valuer's opinion, not fact – these assets may be more difficult to realise and may not be realisable at all. The level of tax benefits and liabilities will depend on individual circumstances and may change in the future. Where funds invest in non-investment grade bonds, that may increase the risk to capital.
